Re: Victoria Bay Freezer Cleaner USDA Certification
(K00080-K00083)

To Whom It May Concern:

As you may be aware, USDA no longer offers a program of product authorization and classification. Chemical manufacturers may now self-certify their products.

This is to certify that this product was developed and is manufactured with consideration for the USDA "Guidelines for Obtaining Authorization of Compounds to be used in Meat and Poultry Plants." This product meets the requirements of 9CFR Section 416.4(c).

This product is acceptable for use on floors and walls in official establishments operating under the Federal meat and poultry products inspection program. (formerly USDA Classification A5.)

When used in areas with sub-freezing temperatures, potable water rinsing is not required following use provided that the solution and solubilized soil are effectively removed by wiping or wet vacuuming.

Sincerely,

Courtney Cosner
