PWNING SMART HOMES
IN UNDER 10 MINUTES

ADITYA GUPTA (@ADI1391)
FOUNDER & CEO, ATTIFY

ADITYA GUPTA

- **Founder & CEO**, Attify
- Help companies **secure IoT devices**
- IoT Security **Penetration testing** and **Training**
- **Speaker** @ BlackHat, Defcon, Syscan, OWASP AppSec, Toorcon etc.
- **Author** : Learning Pentesting for Android Devices, Offensive IoT Exploitation, IoT Hackers Handbook, IoT Pentesting Cookbook

AGENDA FOR THE TALK

- Introduction to IoT Security
- What is a smart home / enterprise
- Vulnerabilities in Smart home systems
- Firmware and Hardware Exploitation
- Mobile Exploitation
- Radio Exploitation
- What can be done about it

PROBLEMS WITH IOT SECURITY

- If one of the component fails, entire system goes down
- Rush to market
- Supply chain
- Fragmentation
- Lack of awareness
- Most of the devices that you see out there are insecure

ISN'T IOT ALREADY SECURE?

A fridge full of spam: Hacked domestic appliances send a torrent of junk email

Monday 20 Jan 2014 10:24 pm

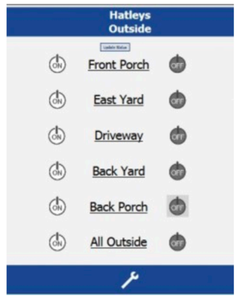
When 'Smart Homes' Get Hacked: I Haunted A Complete Stranger's House Via The Internet

Kashmir Hill, FORBES STAFF

Welcome to The Not-So Private Parts where technology & privacy collide **FULL BIO**

Opinions expressed by Forbes Contributors are their own.

"I can see all of the devices in your home and I think I can control them," I said to Thomas Hatley, a complete stranger in Oregon who I had rudely awoken with an early phone call on a Thursday morning.



The Hatleys' home was at my command after a Google search

He and his wife were still in bed. Expressing surprise, he asked me to try to turn the master bedroom lights on and off. Sitting in my living room in San Francisco, I flipped the light switch with a click, and resisted the Poltergeist-like temptation to turn the television on as well.

"They just came on and now they're off," he said. "I'll be darned."

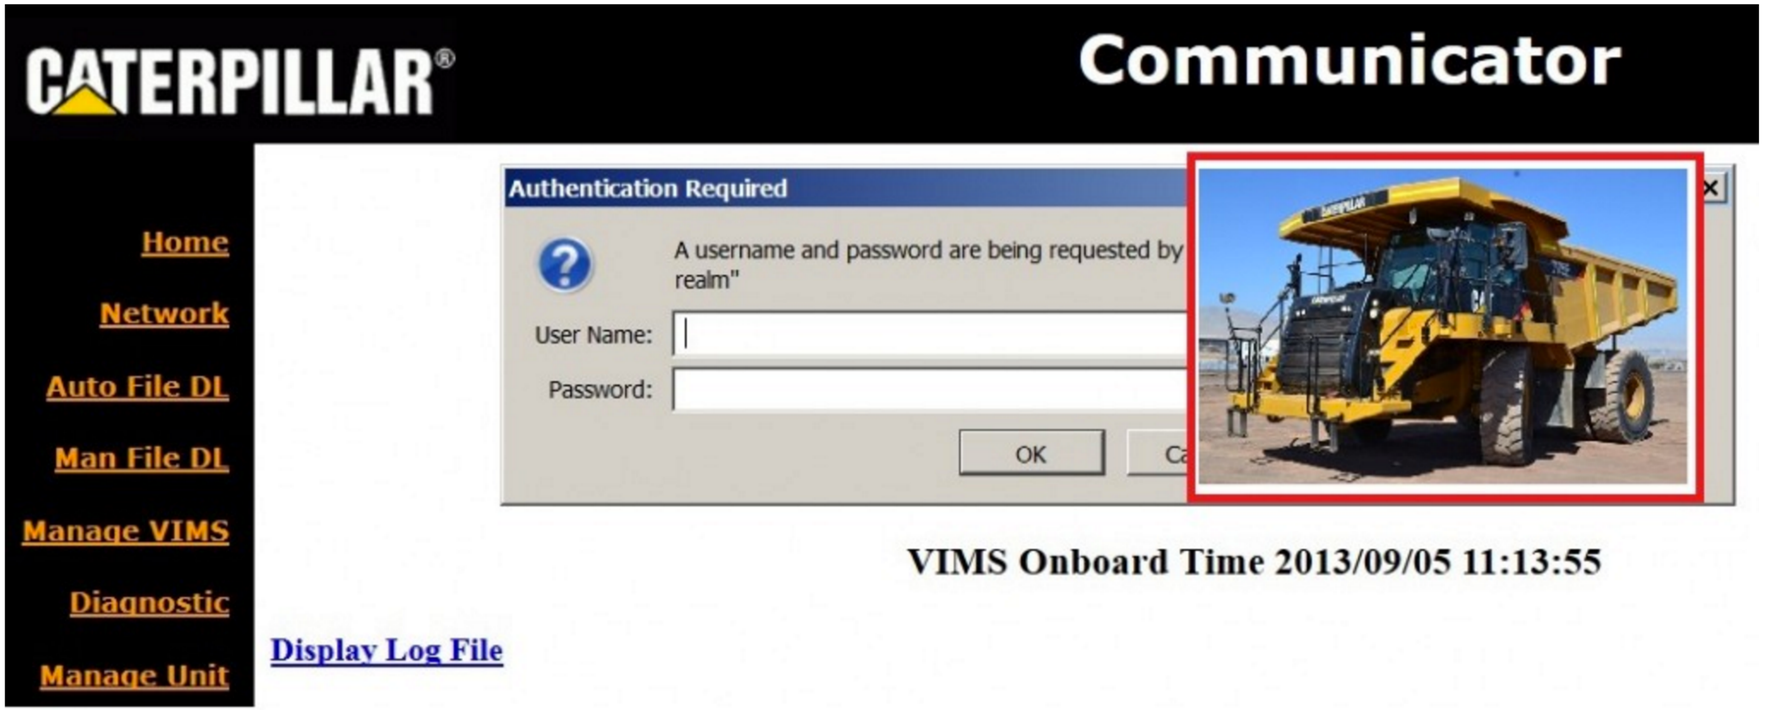
The Crazy Things A Savvy Shodan Searcher Can Find Exposed On The Internet

While on a drive through Shodan, Shawn Merdinger, a security researcher at the University of Florida, found a bunch of Caterpillar trucks that were “parked” on the open Internet. Their onboard monitoring systems were accessible with an easily guessed username/password:



RISK ASSESSMENT —

9 baby monitors wide open to hacks that expose users' most private moments

Despite its ubiquity, Internet of Things security still isn't ready for prime time.

DAN GOODIN - 9/2/2015, 9:38 AM

points out, the report comes a week after an Indiana couple reported someone hacked their two-year-old's baby monitor and played the Police's "Every Breath You Take" followed by "sexual noises."

1. The Philips In.Sight B120 establishes a direct connection to the camera's backend web application onto the public Internet, unencrypted and unauthenticated. By brute forcing the possible hostname and port number combinations used by the third-party service provider, an attacker can locate an exposed camera and is able to watch the live stream, enable remote access (e.g. Telnet), or change the camera settings.

A Hackable Dishwasher Is Connecting Hospitals to the Internet of Shit

Despite all kinds of internet-connected things getting pwned, manufacturers insist of putting stuff on the internet without any security.

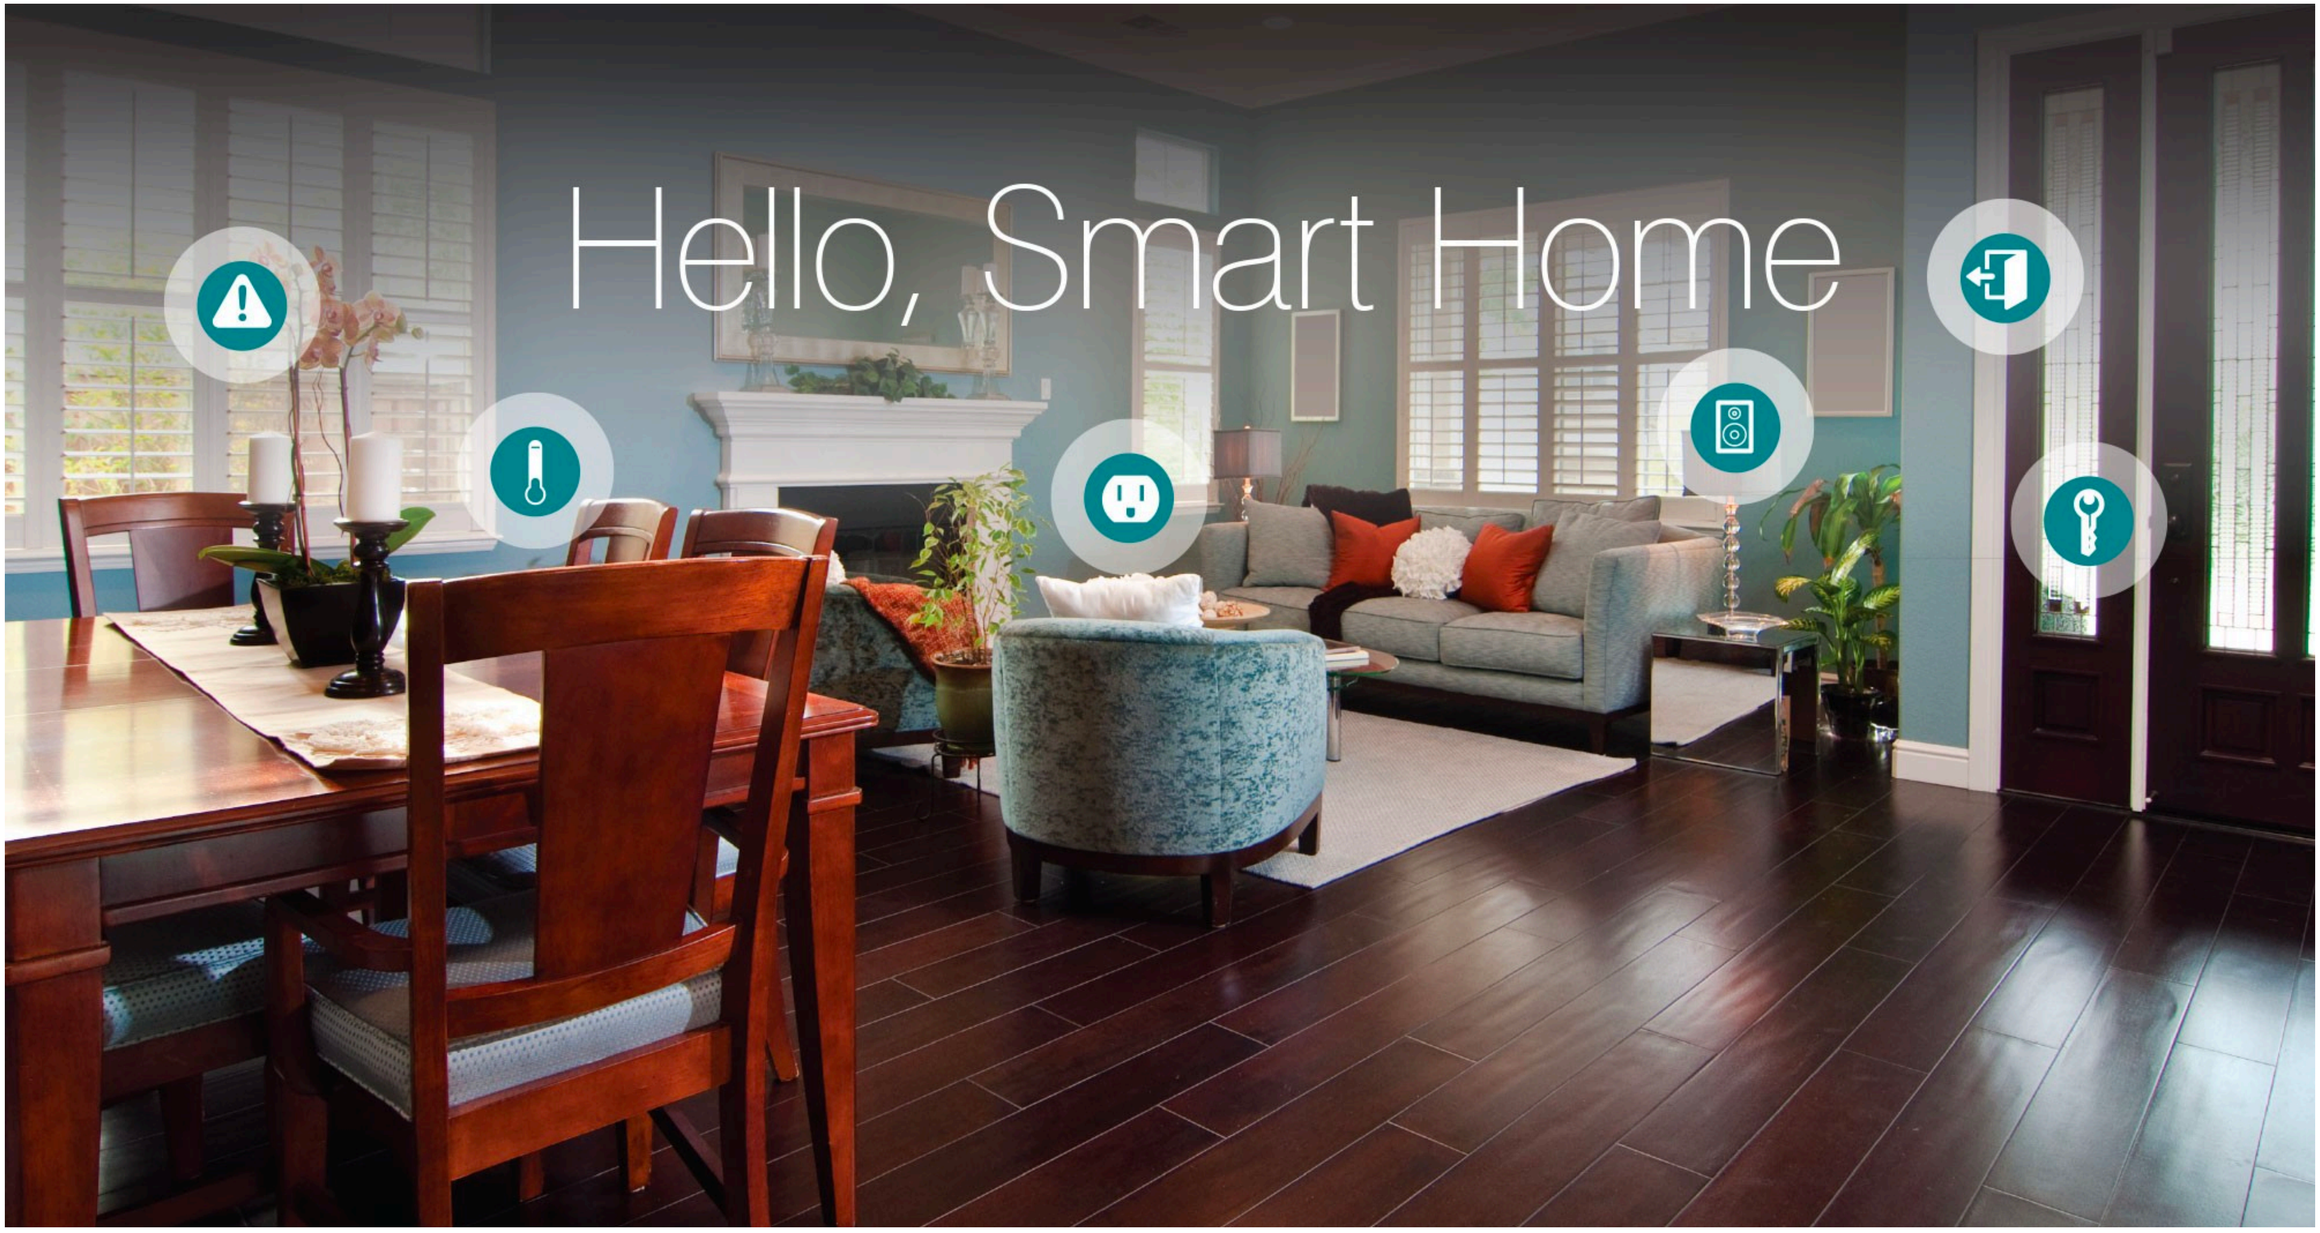
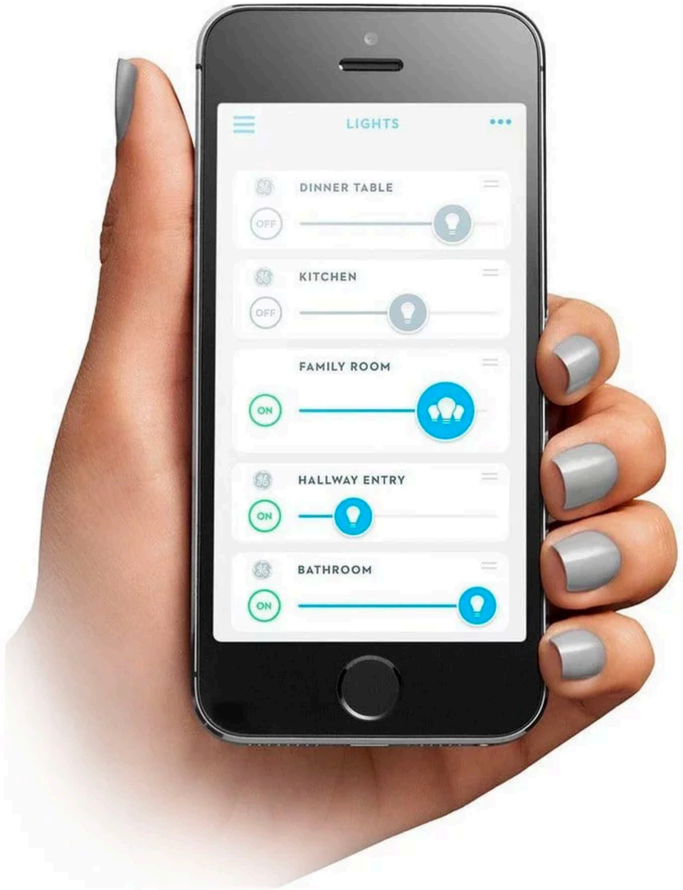
COMPONENTS OF A SMART HOME



Hello, Smart Home



LIGHTS
DINNER TABLE
OFF
KITCHEN
OFF
FAMILY ROOM
ON
HALLWAY ENTRY
ON
BATHROOM
ON

LIGHT BULBS

LEADING TO THINGS LIKE THESE

DOOR LOCKS

AIR PURIFIER

SMART HOME GATEWAY

COFFEE MAKER

WHAT IS A SMART HOME

- Allows you to control various aspects of the home using your smart phone or additional device
- Lights, Temperature, Coffee, Thermostats, Toys, Dishwashers, Refrigerators, Security cameras, Door Locks, Water bottles, Microwave, TVs etc.
- If one device gets compromised, what about the other devices on the network
- We just need ONE vulnerable device on the network

COFFEE MACHINE

- Happened during one of our enterprise/VC-Funded startup pentests
- The office we were targeting was using a “Smart” Coffee machine
- Operational over both BLE and WiFi
- Sniff the traffic using a Ubertooth One, and you’ve got yourself the WiFi credentials
- Coffee Machine => Vulnerable Employee System => Credentials => Domain Admin => Entire network owned including Client databases

ONE REVIEW ON AMAZON

Customer Review

★★★★★ **SHE TOOK THE HOUSE, THE DOG AND THE 401KÂ€¦. BUT I STILL CONTROL THE THERMOSTAT.**

By The General on March 26, 2014

Size: 8.06 sq inch

My former wife loves to take expensive vacations. We live in Ohio, which doesn't exactly have extravagant places to see unless you like to watch grass growing or interstate construction. While we make OK money, I'm convinced she felt the need to single handedly improve the US economy by taking elaborate vacations: Broadway shows in New York City, gambling in Las Vegas, Spa's in Arizona, sightseeing in San Francisco. The airlines know me so well they ask about my dog when I call to make reservations. His name is Fred.

In my attempt to try and save whatever I could so the princess could have her nice things I bought this Honeywell Wi-Fi enabled device so I could adjust the HVAC while we were away piling up massive amounts of debt on Mickey Mouse watches. I thought we could save a few bucks by keeping the temp cool in the winter and warm in the summer. The device was easy to install. I did not have the "blue" connector so I had to re-purpose the green one - this required an adjustment to the actual HVAC unit in our home. There are plenty of videos on Youtube to demonstrate how to do this. Within an hour I was up and running.

The device works flawlessly. You can adjust the temp from anywhere you have a Wi-Fi or cellular signal. Little did I know that my ex had found someone that had a bit more money than I did and decided to make other travel plans. Those plans included her no longer being my wife and finding a new travel partner (Carl, a banker). She took the house, the dog and a good chunk of my 401k, but didn't mess with the wireless access point or the Wi-Fi enabled Honeywell thermostat.

Since this past Ohio winter has been so cold I've been messing with the temp while the new love birds are sleeping. Doesn't everyone want to wake up at 7 AM to a 40 degree house? When they are away on their weekend getaways, I crank the heat up to 80 degrees and back down to 40 before they arrive home. I can only imagine what their electricity bills might be. It makes me smile. I know this won't last forever, but I can't help but smile every time I log in and see that it still works. I also can't wait for warmer weather when I can crank the heat up to 80 degrees while the love birds are sleeping. After all, who doesn't want to wake up to an 80 degree home in the middle of June?

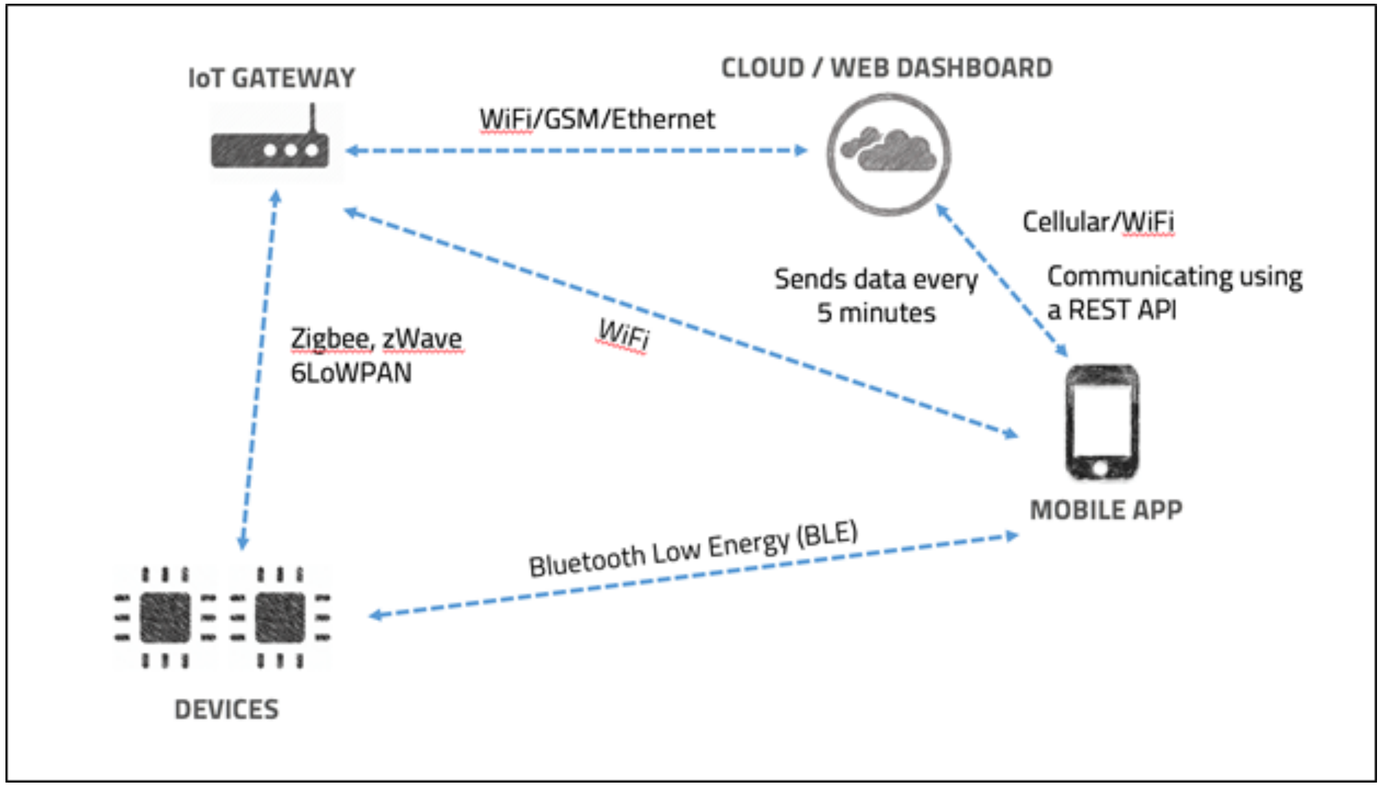
ATTACK SURFACE MAPPING

- Look at the entire IoT solution
- Focus on all individual components and the connectivity between them
- What areas do you think could be attacked
- What kind of attacks
- How to test them
- How to secure them

MAPPING THE ATTACK SURFACE

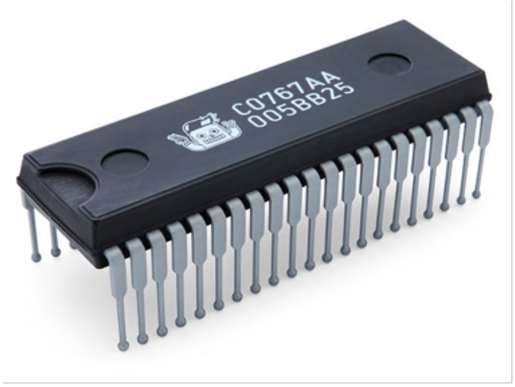


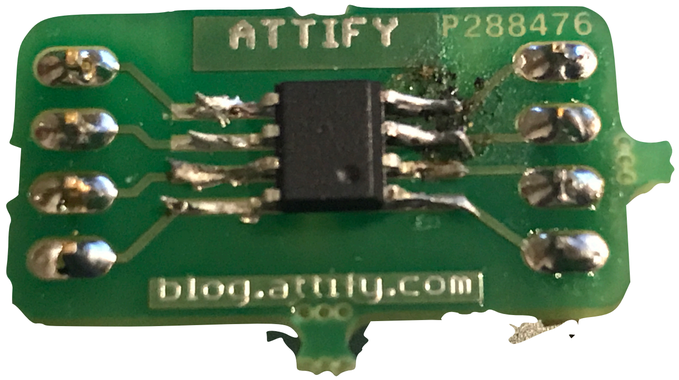
HARDWARE

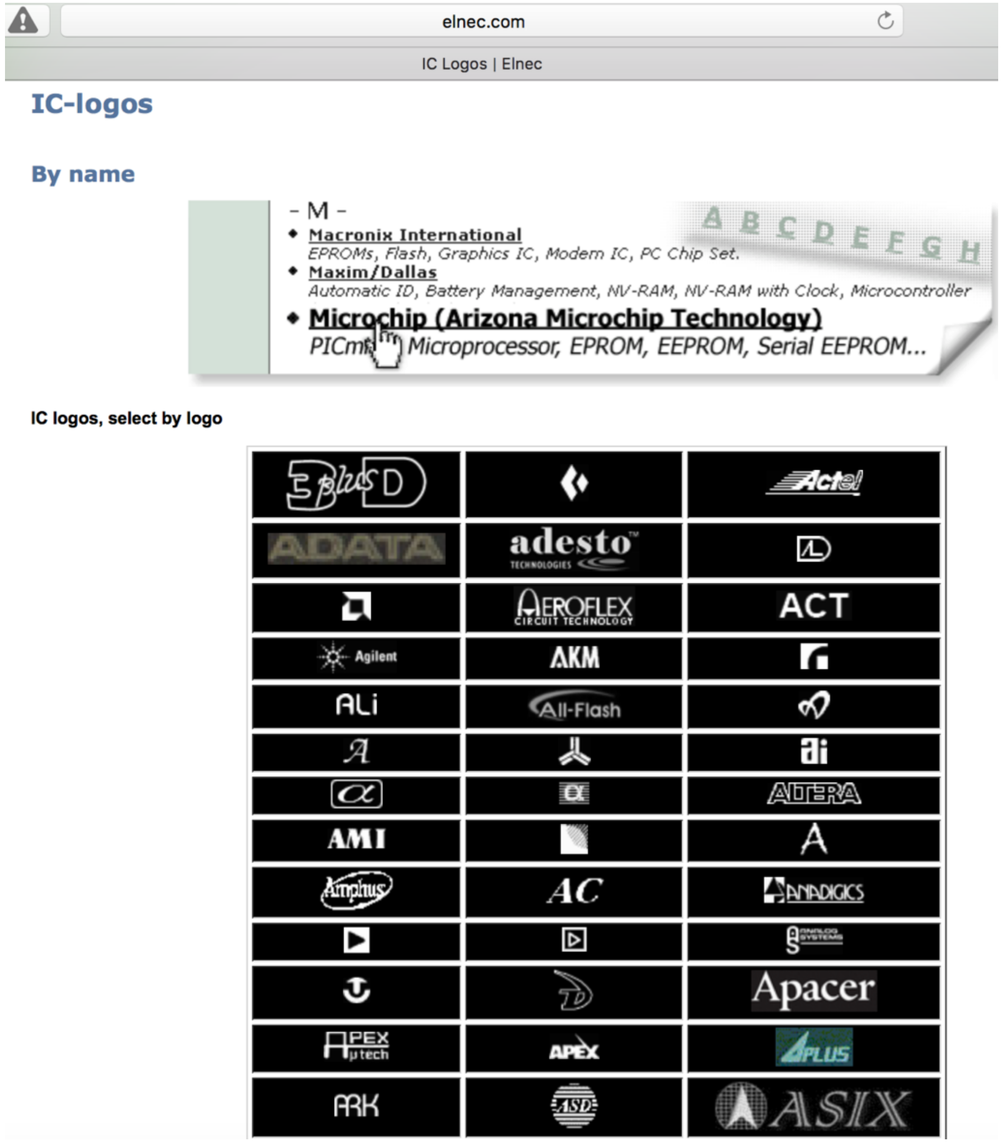
INITIAL ANALYSIS

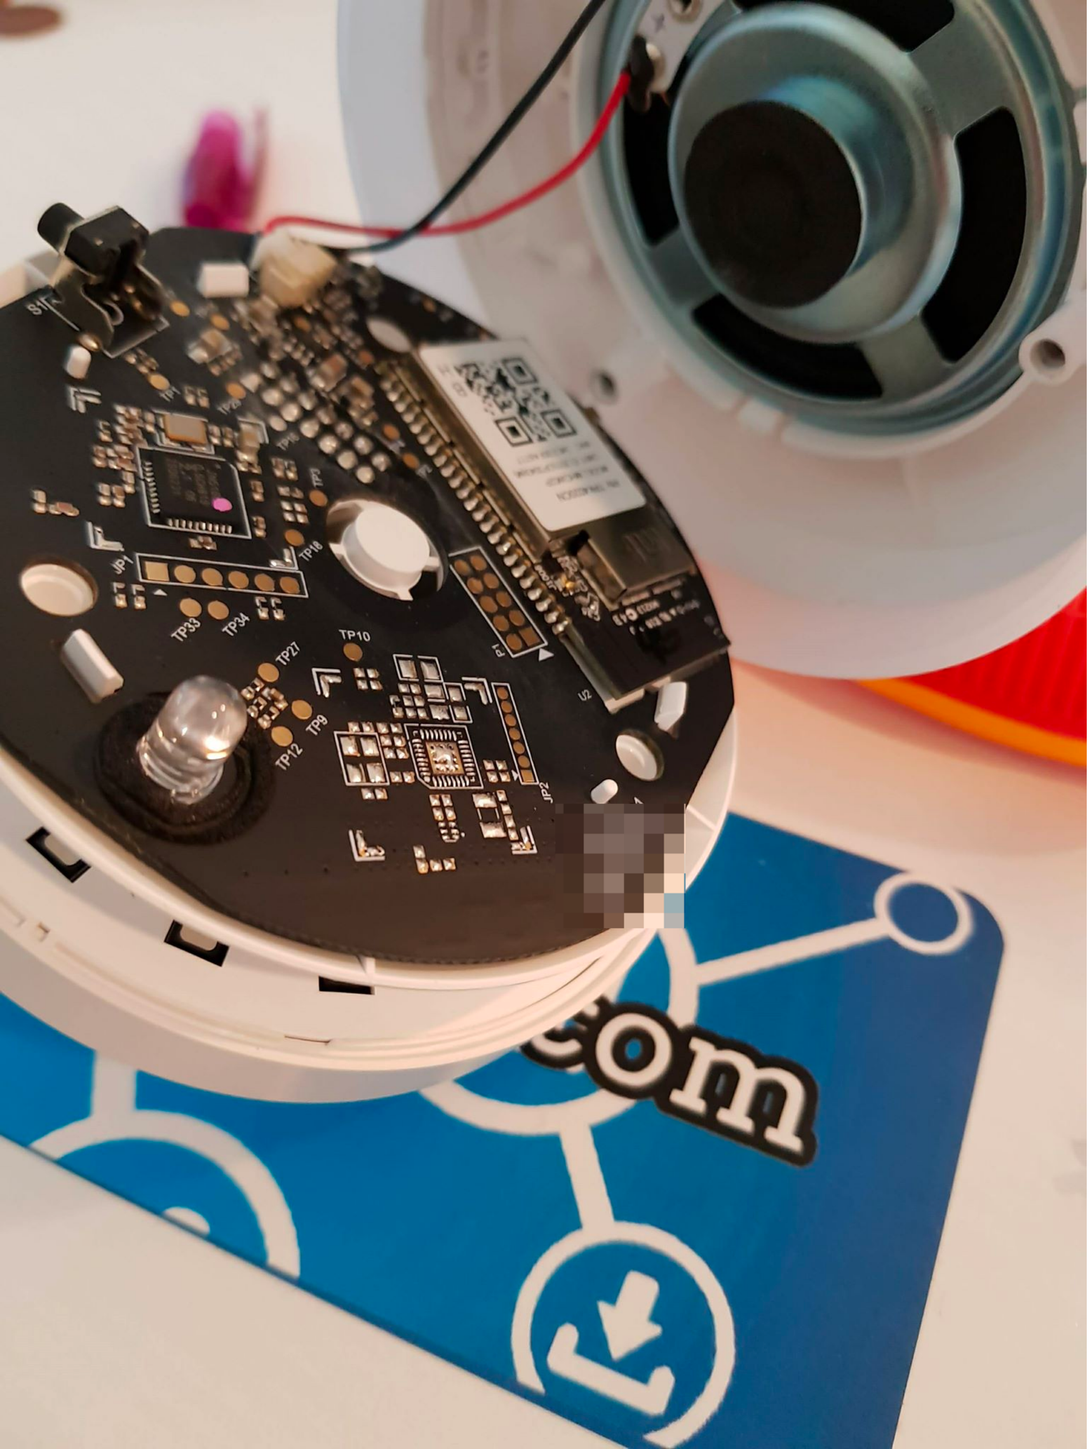
??

INITIAL ANALYSIS







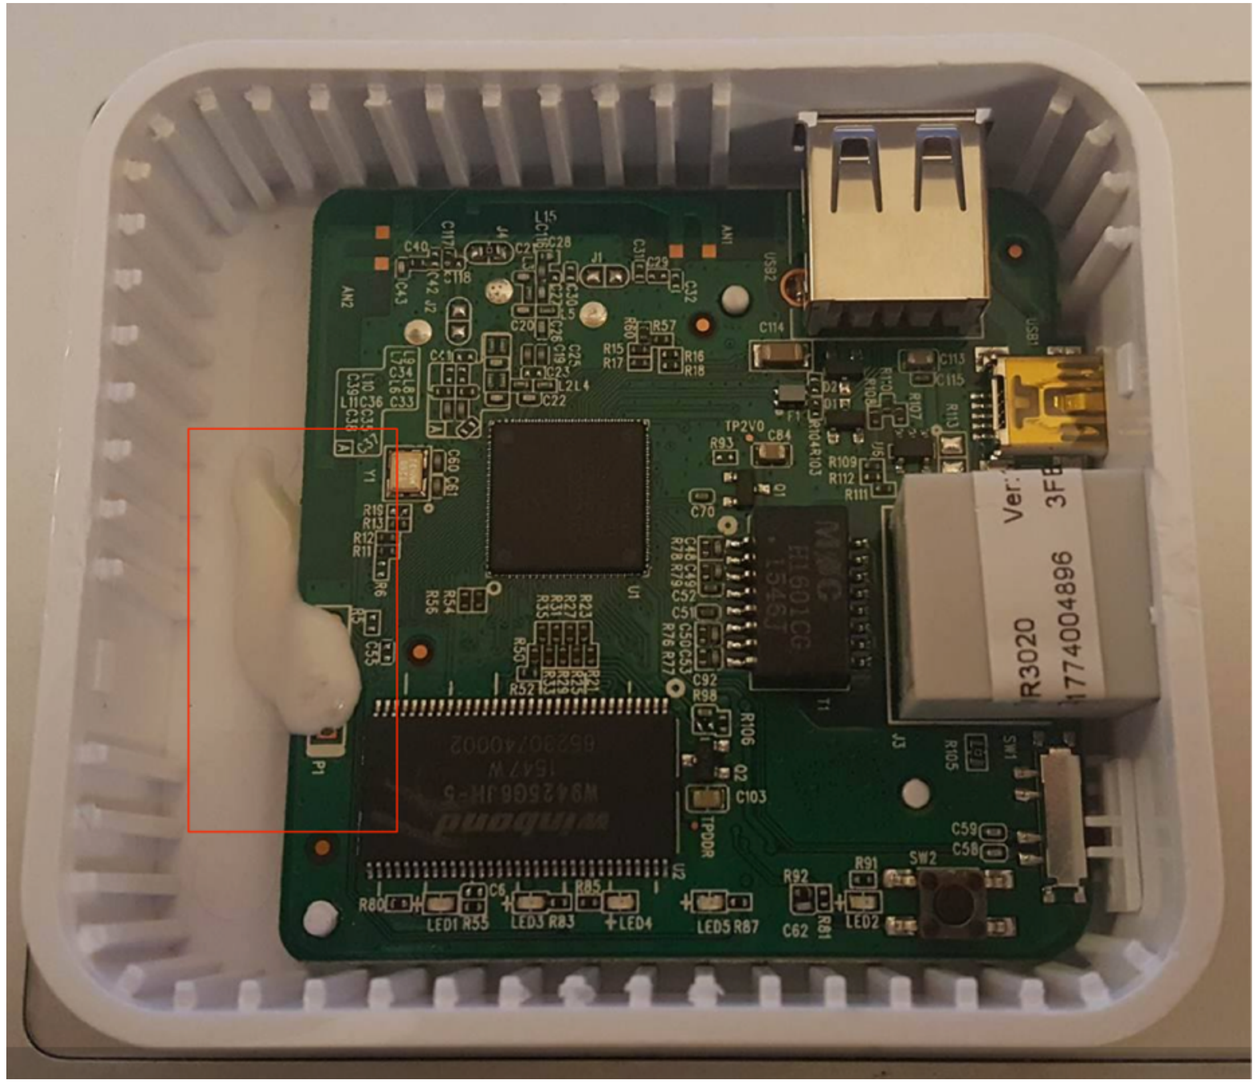


- Open up the hardware
- Look at all the various possible entry points
- This could be external interfaces (USB, ethernet, external peripheral access, audio jacks etc.) or internal interfaces (UART, SPI, I2C, etc.)
- Figure out how you can interact with the device
- Get a root shell, add gdb server, dump firmware, flash modified firmware

UART EXPLOITATION

- One of the most easiest interfaces to get access to
- Pinouts can be identified using Multimeter
- Once it is identified, use Attify Badge (or BusPirate) to connect to it
- Figure out the correct baud rate
- And you will be able to see debug logs, shell etc.

UART EXPLOITATION



- IP Camera
- Decided to have one of our team members do a bit of investigation before even opening the device
- Usually can gather information from FCC-ID, online forums and other public resources
- RE the Windows binary that comes with this IP Camera
- Found a Buffer Overflow in the login box => Exploitable (in 1 day)
- It’s not HARD!

Aditya Gupta 2:21 PM
you can start with this

this is a baby monitor device

Aditya Gupta 2:22 PM
uploaded this file

[redacted]IP-camera.rar
69 MB Binary

Barun Basak 2:49 PM
alright,

Today

Barun Basak 5:43 AM
So I analyzed the windows binary. What I can see is i connects to a server at china. The ip camera probably transmits the video feed there. The video feed should also be visible from the website. Apart from this, discovered a buffer overflow in the login box.

FIRMWARE SIGNING PROTECTIONS

WeMo also uses a GPG-based, encrypted firmware distribution scheme to maintain device integrity during updates. Unfortunately, attackers can easily bypass most of these features due to the way they are currently implemented in the WeMo product line. The command for performing firmware updates is initiated over the Internet from a paired device. Also, firmware update notices are delivered through an RSS-like mechanism to the paired device, rather than the WeMo device itself, which is distributed over a non-encrypted channel. As a result, attackers can easily push firmware updates to WeMo users by spoofing the RSS feed with a correctly signed firmware.

The firmware updates are encrypted using GPG, which is intended to prevent this issue. Unfortunately, Belkin misuses the GPG asymmetric encryption functionality, forcing it to distribute the firmware-signing key within the WeMo firmware image. Most likely, Belkin intended to use the symmetric encryption with a signature and a shared public key ring. Attackers could leverage the current implementation to easily sign firmware images.

Belkin uses STUN/TURN and an exposed firmware signing key. IOActive discovered an unfortunate configuration relating to this. A lack of entropy on the device results on less-than-random GUIDs. IOActive also discovered that the WeMo restful service endpoint is vulnerable to attack. We reported to Belkin an arbitrary file download flaw relating to this.

Internet of Things Teddy Bear Leaked 2 Million Parent and Kids Message Recordings

Lorenzo Franceschi-Bicchierai
Feb 27 2017, 4:00pm

A company that sells “smart” teddy bears leaked 800,000 user account credentials—and then hackers locked it and held it for ransom.

UPDATE, Feb. 28, 12:25 p.m. ET: After this story was published, a security researcher revealed that **the stuffed animals themselves could easily be hacked and turned into spy devices**.

BLE

BLUETOOTH LOW ENERGY

- Pretty different from traditional Bluetooth
- Meant for short bursts of data
- Typical radio attacks work - Sniffing, Jamming, Replay, MITM etc .
- Can figure out which characteristics needs to be written
- Sniff the communication, figure out handles, rewrite them
- Tools used - Ubertooth One, BLE dongle
- Additional tools - Gatttacker, BTLEJuice

ATTACKING BLE

- Light bulb

BREAKING AUTHENTICATION

- Demo

BREAKING AUTHENTICATION

- Demo on RFID key entries
- Pretty easy to clone
- Proxmark 3 works in pretty much all the cases
- Can also build your own cheaper version using an Arduino and an RFID Card reader

make it
happen

ATTACKING ZIGBEE

- 802.15.4 based protocol
- Used in TONS of smart home devices
- Radio based attacks on ZigBee
- To sniff/intercept/transmit, you need a hardware called AtMel RzRaven (flashed with KillerBee firmware)
- Philips Hue short video demo of Replay Based attack - to control the target device

attify

ZIGBEE WORMS

- PoCs already exists against popular devices such as Philips Hue
- Found by a bunch of researchers including Eyal Ronen, Colin O'Flynn, Adi Shamir and Achi-Or Weingarten
- Full info at - http://iotworm.eyalro.net/iotworm.pdf
- Infects one ZigBee device, and autospreads
- Flashes a new malicious firmware to the nearby ZigBee device
- If this is Philips Hue, what would you think of other manufacturers using ZigBee
