

Search Problems

1. I add a search option, in that case I selected the tag „aBuchhaltung“.
2. Now, Evernote shows all notes with that tag.
3. Now I would like to search for notes containing a specific word within the notes tagged „aBuchhaltung“. Therefore, I would like to insert a specific word there, where the red arrow points to.
4. With the previous Evernote versions that worked fine. With the current version 6.13 I cannot anymore add a word, when the tag is a longer word. The problem: the search item window is not large enough.
