

Platform to control Smart home
and IoT devices

iRidium lite

Solution for fast
control setup

iRidium lite

Easy project setting
from a control panel
without programming

Automatic device
search and interface
creation

Capabilities

Several Interface Designs

Choose the interface
style your customer
prefers

Localization

Make an interface
in the language
your customer speaks

Macros

Create any number
of actions on one button
without programming

Schedules/Routines

Automate everyday
actions/commands

How It Works

Download
i3 lite
app

Scan the network
to find devices you
want to control

Create floors
and rooms
in the interface

Add
control
modules

Give the project
to the customer
via iRidium cloud

Work with iRidium server

Work 24/7

All macros, routines and schedules you created work non-stop every day of the year

Any Amount of Data

Store as much system data as required in the storage you prefer (Dropbox, GoogleDrive, etc.)

Remote Control

Control your project from any part of the world thanks to DynDNS support

Local Control

Control your project via the local net with no Internet access

Data Storage

Collect, analyze and store data received from equipment

Push Notifications

Learn about system changes the moment they happen

iRidium store

online store of modules to control devices in the i3 lite app. Modules are developed by iRidium mobile team and third-party developers.
