

Convert the following rectangular equation into two parametric equations

$$y = 2x + 4$$

simple solution:

other solution:

creative solution:

Convert the following rectangular equation into two parametric equations

$$y = x^2 - 2x + 1$$

simple solution:

other solution:

creative solution:

Convert the following rectangular equation into two parametric equations

$$y = 4x - 3$$

simple solution:

other solution:

creative solution:

Convert the following rectangular equation into two parametric equations

$$y = x^2 + 2$$

simple solution:
