GUIDE FOR ONLINE TRADE PERMITS

For new construction and additions, please upload a copy of the layout.

Electrical and Mechanical permits submitted online shall include the attachment form with quantities listed.

For repair jobs, a permit is required unless the same hardware will be reused in the same configuration. A job that requires replacement or relocation of any part or fixture requires a permit from the City Planning Department.

Plumbing and Gas permits are charged based on required inspections. A new install generally requires 4 inspections.

A property owner may apply for a plumbing permit to conduct work on their property. If you are not a licensed contractor and are obtaining a permit to perform work on your property, select "Owner/Builder" under the "Contractor(s)" search box in the online portal.

Only a tradesman with a Master license may obtain a permit to conduct work on another person's property. A handyman without the applicable license is not authorized to perform electrical, mechanical, plumbing or gas jobs on another person's property.

Both the property owner and contractor/handyman may be issued a citation if work is performed without the required permits.
