Is there any PDF reader in the market that has text folding functionality? What I'm talking about is the way text wraps when zooming on a web page. Most of the PDFs are meant to be read on a computer monitor, so a line of text in a PDF document is too long for a small phone screen. And scrolling horizontally for each line is too much of a pain. Home Media Favorites Menu Similar Threads - Best PDF Text PDF browser apps have always been a pain in the neck. In general, there are two important use cases for PDF files. The first for business, where you can create forms in PDF format and have people to fill them out. The second is for reading eBooks. The PDF is an easily accessible file that works well for reading. Usually, PDF reader apps only cater to one of two of these use cases and in this list we've compiled a selection of the best PDF browser apps on Android for both. You can also check out the best PDF browser apps on other platforms by clicking here! There are two dominant types of PDF readership. The first is for business and professional use. This allows you to do things like open PDFs, fill them out when it's a form, draw your name, annotate, and other similar features. They are most useful for business people, students or anyone who fills out forms and sends them back online via email or otherwise. Some typical examples of this include Adobe Acrobat Reader and DocuSign. Some apps, like CamScanner, add things like document scanning and fax functionality for additional functionality and compatibility. The other type of PDF readers are for recreational use. Many people format eBooks in PDF format. A proper PDF reader for books includes features such as support for chapters, a reading mode, different browsing modes, and other similar features. Apps on this list like those include Google Play Books and Moon+ Reader. These apps almost always support other eBook types. This list has for both types. There is also a third type. All-in-one style apps include PDF support along with other features. For example, CamScanner and Fast Are actually documenting scanner apps with PDF browser functionality built-in. These programs are perfect for killing two birds with one stone and are also excellent for people who don't want a ton of apps but want all the functionality. We also have some apps like that on this list. Adobe Acrobat ReaderPrice: Free/\$12.99-\$14.99 per monthAdobe Acrobat Reader is the default choice for many people. Most of the time it just works. The program also has other features, including the ability to annotate and take notes on PDFs, fill out forms, sign cloud storage support, and sign your signature. You also get a full Material Design experience and support for 18:9 displays along with other aspect ratios. Of course, it's more for business or professional use than for reading PDF books or anything like that, so we just recommend it for that use case. There's a subscription cost that unlocks features along with Adobe's Creative Cloud storage option. It's not bad for your basic stuff. CamScannerPrice: Free/\$4.99-\$6.99 per month/Additional in-app purchasesCamScanner is one of the most powerful PDF readers and creators. It can import PDFs. That's just the tip of the iceberg. It can also scan physical documents in PDF files on your phone. It has a variety of features to improve the scanning process that helps make clean, clear documents. You can annotate PDFs, share with anyone or even fax them for a nominal fee. The paid route brings additional features like 10GB of cloud space, some editing features, and more. However, the free version should do well enough for simple things. DocuSignPrice: Free/\$10-\$40 per month (three plans)DocuSign is a PDF reader for business use. The app's primary function is to open documents, allow you to fill it in, sign, and send them where they need to go. That part of the program is free. There are also some subscription plans. \$10 per month gives you some extra features. The \$25 and \$40 per month subscriptions simply build on them. Honestly, you don't really have to worry about subscriptions unless you do things like this professionally. Fast ScannerPrice: Free/\$2.99Fast Scanner is another PDF scanner app, but it's not as heavy as CamScanner. This nifty, simple app will scan documents using your smartphone camera and turn them into either JPEG or PDF files for future use. It comes with a range of features to help up and clean up the scan as much as possible before finalizing something. You can then use any PDF browser application to view it yourself. Most of the features, and all of the important ones, are available in the free version. You can also get the premium version for free with Google Play PDF ReaderPrice: Free/\$0.99Foxit is a lot like ezPDF. Both boast all-in-one solutions for PDF use. You'll also get ConnectedPDF the ability to fill out PDFs, and support for PDF files with certificates, passwords, and Microsoft's RMS. It's mostly for business use, while ezPDF is more for pleasure reading, but it also works well to read. Foxit also has an app specifically for business use, which costs \$15.99. This version only costs \$0.99.Google PDF ReaderPrice: FreeGoogle PDF Reader is a plug-in for Google Drive. The plugin gives native PDF support for Google Drive users. This isn't the most powerful PDF reader app. However, you can open and view PDFs as needed. You can also print, search, and copy pdf files. It also works as a standalone application for those who need something very simple but don't exclusively use Google Drive. There's not much else about it, honestly. It opens up and lets you read through PDFs and that's all it does. The app works perfectly for simple use cases. Google Play BookPrice: FreeGoogle Play Books is Google's answer to Amazon's Kindle. You can buy a variety of books from the store and read them wherever. It can also read PDF files. There's no business use here — it's just for pleasure reading. You can also upload the PDF files (and EPUB) to the cloud to access across devices. The books become part of your library like any other book. This is a great way to consolidate a large collection behind a service that lets you buy more books. The app is free, but you can obviously spend money on the in-store books. Google has another PDF reader working with its Google Drive suite called Google PDF Viewer. This is not a bad one for super basic use cases. LibreriaPrice: Free (with ads)Libreria is one of the more interesting PDF readership programs. That seems to change dramatically every time we update this list. These days, the app bills itself as an all-in-one eBook reader. It supports more than a dozen formats, including PDF, EPUB, EPUB3, MOBI, DJVU, ZIP, TXT and others. It also features a modern design, a night and day off for easier reading at night, and more. You can even listen to books using Text-to-Speech if you really want. The app is a little nicer than most others on this list, but it's also completely free (with ads). They also have another PDF reader on Google Play. It goes by the boring name PDF Reader and also works pretty well. Microsoft WordPrice: Free/\$6.99-\$9.99 per monthMicrosoft Word is one of the most powerful word processors on mobile or on desktop. The program also supports PDF files. You can create PDF files and save them as that file type or you can open PDFs and view them through the app. Of course, Word also does a host of other things, including word processing, things like resume building and more. In addition, even features for eBook reading and other such PDF use cases. It's a decent decent solution for those who need a PDF reader as well as a word processor. Mixplorer SilverPrice: \$4.49Mixplorer Silver is an all-in-one file explorer. It does all your usual file browser stuff. This includes browsing files, opening different types of files, handling archives, and support for most types of media sources. What makes this one special is the support of all kinds of things via plugins. It has support for e-book formats along with PDF. A separate (free) plugin adds PDF reader support to Mixplorer Silver and a decent eBook reader experience with it. This is not the most elegant solution for e-book reading, but it is a great way to kill several birds with one stone. The main application is \$4.49. The PDF add-on (and all the other add-ons) is free. Moon + ReaderPrice: Free/\$4.99 with in-app purchasesMoon + Reader is one of the most popular eBook readers. It has a bootload of features like theme support, tons of visual options, automated browsing, intelligent paragraphs, dual page mode (for landscape), and more. The app also supports a bunch of formats such as EPUB, EPUB3, and of course PDF. It has the occasional rough edge, but it's one of the best options for those reading books in PDF format. OfficeSuitePrice: Free/\$29.99+ OfficeSuite is one of the most popular office apps on mobile devices. It can do a lot of things. There is support for documents (including from Microsoft Office), spreadsheets, presentations, and even PDF files. The PDF functionality is almost just business focused. You can fill out forms, sign them, and add/access security features. This is a good option for those who need a traditional office program with PDF support. However, the premium version is quite expensive. PDF Viewer ProPrice: FreePDF Viewer is a simple, basic PDF browser app. It carries all the basic features, including annotations, cloud support, zoom, bookmarks, and more. The pro version merges themes, multiple customization options, and document into a single PDF. You also get Material Design and a somewhat easy UI overall. We had no problem during our testing. However, some reported the occasional performance error. Fortunately, the free version is free, of course, so you can try it out without paying anything. It's above average, but more powerful options are available. WPS OfficePrice: Free/\$29.99 a yearWPS Office (formerly Kingsoft Office) is another all-in-one office solution. It's mostly an office app and deals with various documents, spreadsheets, and the like, but also comes with PDF features. You can convert different documents into PDF and view PDF files natively. This is useful if you have a form or something that should be in a more official format. It's not too heavy on PDF features, but you need an office app and a PDF reader, this is a great way to kill two birds with one stone. The subscription adds some additional, useful features removes ads. However, this is not entirely necessary. Xodo PDF ReaderPrice: FreeXodo is probably the best completely free PDF reader. It boasts fast charging and smooth navigation. You can also fill out PDF forms, sign them, and save your signature for future use. It has a surprisingly good number of features since it's free without purchases in the app. We also like that it works for both business and recreational use. There also don't seem to be ads. Honestly, we can't find very wrong with that. However, you can find more features for business or eBook reads with a dedicated app. If we missed any of the best PDF readers for Android, tell us about them in the comments!
