

# Lesson 03

## Senses

Teacher:  
Komal, can you hold ice  
for a long time?

Komal:  
No, my fingers  
will get cold.

Teacher:  
O.K. Bharati, can you  
touch fire?

Bharati:  
No. The fire is too hot!

Teacher:  
Correct! Mohan, now tell  
me which is heavy football  
or a tennis ball?

Mohan:  
(Holding both balls in his hands) Football is heavier  
than tennis ball.

Teacher:  
Good. Have you slept on a  
wooden bench before?

Dinesh:  
No, the bench is hard.

Teacher:  
I agree with you.

Ravi, how can you tell that

1) The ice is cold,

2) The fire is hot,

3) Football is heavy, and

4) A bench is hard.

Ravi: We can tell this because we can feel the coldness of ice.

The heat of fire, the  
heaviness of a football  
and

# The hardness of a bench

Teacher:  
Children remember that  
this gift of feeling is  
called the sense of touch.

The sense of touch is our first sense. Skin is our sense organ or a tool.

Jateen, How does ice cream taste?

Jateen:  
Teacher, It tastes sweet.  
I love ice cream!

Teacher:  
Rakesh, can you tell what  
is the taste of orange juse?

Rakesh:  
Orange juice is, little sweet  
and little sour.

Teacher:  
How did you get that idea?

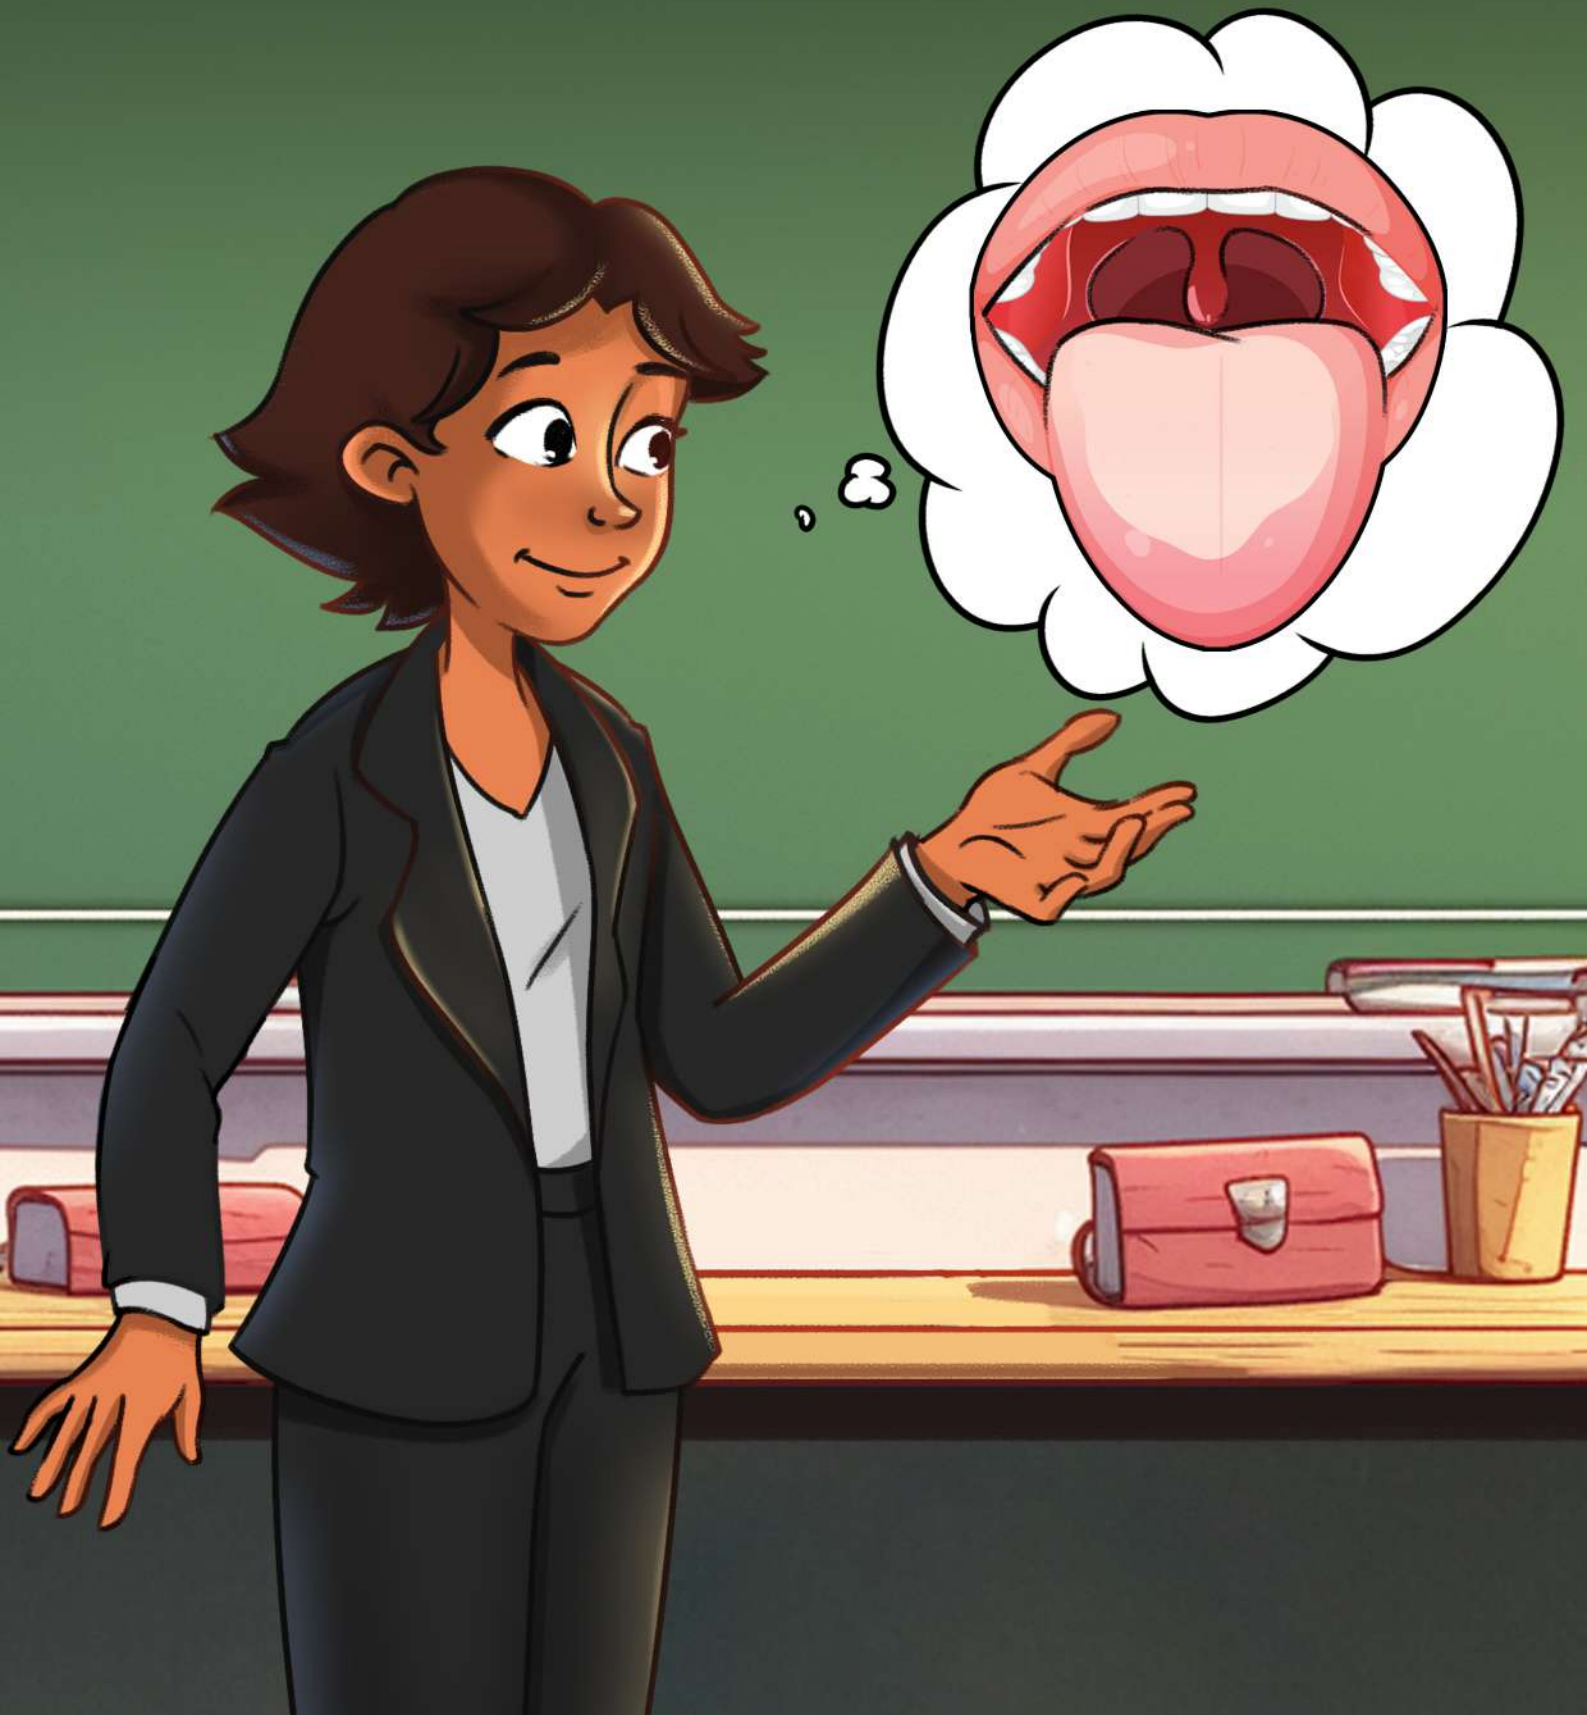

Rakesh:  
My tongue helped me  
decide the taste.

Teacher:  
Children, our tongue has  
sense of taste.

It helps us tell if things are sweet, sour, bitter, or spicy.

The sense of taste is our second sense.

The tongue is our  
sense organ.

Mina, Which flower  
do you like?

Mina: Rose.  
Teacher: Why?

Mina: I like the smell of the rose.

My nose helps  
me to decide that.

Teacher:  
So children, because of our  
sense of smell, we know  
good and bad smell.

The sense of smell is our  
third sense.

The nose is our  
third sense organ.

Teacher:  
Koyal, what is the colour  
of the sky?

Koyal:  
teacher it is blue.

**BLUE**

Teacher:  
Bharati, what is the  
color of your chain?

Bharati:  
Teacher, the chain  
is golden.

Teacher:  
Tell me how do  
you know this?

Bharati:  
Teacher, We see colors  
with our eyes.

Teacher:  
Yes, you are right.

The sense of seeing (sight)  
is our fourth sense.

The eye is our fourth sense organ.

(There is a lot of noise outside the window)

Ravi:  
Teacher, speak loudly?

Teacher: Why?

Ravi: There is too much noise. Teacher, we cannot hear you.

Teacher:  
What kind of noise do you  
hear?

Ravi: We hear the noise of the band.

Teacher:  
So Ravi, how do you hear  
these different noises?

Ravi: Teacher, I hear with my ears.

Teacher:  
Right, Ravi. Remember  
because of our ears, we  
can hear different noises.

The sense of Hearing is our fifth and last sense.

The ear is our fifth sense organ.

Now you know that:  
1) We feel with our skin

## 2) We taste with our tongue

3) We smell with our nose

4) We see with our eyes

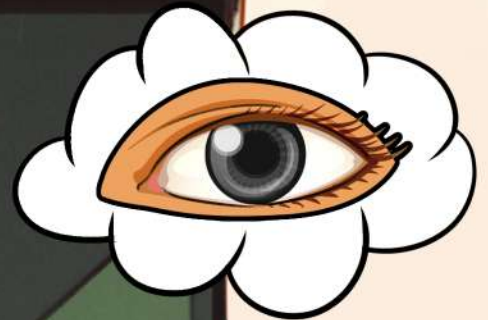

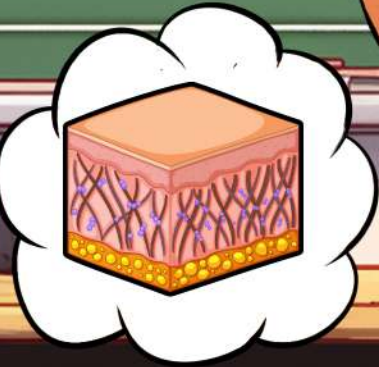

5) We hear with our ears.

Thus, there are five senses in all and we have five sense organs.

We have all five-senses.  
So we are five-sensed  
living beings.

Komal:  
Teacher, do all living beings  
in the world have all the  
five senses like us?

Teacher:  
Can anyone answer that?

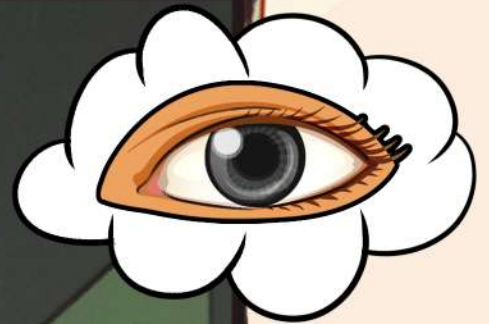

Teacher: No!  
Animals, fish, and birds  
have five senses.

Insects and bugs may have four, three, or two senses and plants have only one sense.

We are very lucky to have  
all the five senses.

So we must use  
them wisely.
