

# POLE BAG

Jameson pole bags are crafted from REPet/PVC water resistant material, ensuring unparalleled safeguarding for your fiberglass or wooden poles. This bag effectively maintains your poles dryness and cleanliness while guarding against potential scratches and damage, and will preserve the performance of your Jameson tree pruning products. This is particularly important to preserving your poles' dielectric characteristics, and is actually mandatory in some locations.

Each generously-sized bag, easily distinguishable in vibrant yellow, incorporates four individual compartments for holding 6' poles and a fold-over flap with plastic buckles for secure closure. The expansive outer pocket is designed to accommodate the pruner head, blade heads, and any other accessory. Once packed, the entire bag can be conveniently folded in half lengthwise, facilitating hassle-free transportation with strong carry handles.
