

Real-World Scenarios Introduction

Hi, I'm David L. Prowse and I'd like to welcome you to the Real-World Scenarios. These real-world scenarios are designed to reinforce the concepts covered in the *CompTIA Security+ SY0-501 Cert Guide*. Read through each scenario, and answer the included questions based on your findings and according to your own experiences with technology. You are expected to research and investigate to find quality solutions. Following each real-world scenario is an example solution. *Your* solution might vary, but both can certainly be valid. So, remember, there is often more than one potential solution to a problem!

Important!! It is recommended that you go through the scenarios on a "test" computer—meaning one that does not have any important data on it. A clean test network would be preferable as well.

If you haven't already, be sure to download the PDFs for the Real-World Scenarios. They include the scenario, questions, and solutions. They also state whether there are associated videos and simulations. Go through them in order until you have completed them all!

There are more than 40 videos and 30 simulations within the 50 or so Real-World Scenarios. Hopefully, this extra material will help reinforce what you have read in the book. And of course, don't forget to go through the practice exams in Pearson's custom test engine.

Check out my main Security+ webpage at <http://www.sy0-501.com>, and sign up to my mailing list to be notified when I add content to my site or to the Pearson companion website for the book.

I'm available to answer questions from you at my website as well (<https://www.davidlprorowse.com/contactme.php>).

Good luck on your exam!

Sincerely,

David L. Prowse
