

Sometimes smaller...  
can be better.

The new James SPL Series Slim LED TV speakers sets a new standard for depth and performance.

Only 1.5 inches deep, the SPL Series pairs perfectly with today's generation of thin LED displays and TV's, yet packs in high quality 1" dome tweeters and proprietary, high excursion 4" woofers for unexpected full range response. Hearing bass and volume from a speaker this small is a first.

Each SPL speaker is custom sized and manufactured to match the display and is supplied with custom sized brackets. Color options are also available.

Available in LCR under display formats and James Centergy design, providing left, right and center sound from only a pair of left and right mounted vertical SPL speakers.

SPL series speakers also match many James inwall/inceiling surrounds and inroom, hidden subwoofers.
