Size of enclosure provided

The James Loudspeakers Small Aperture® 53SA-4-1L loudspeaker defines a new category of speaker/lighting for high end home, offices and yachts. The 53SA-4-1L provides high volume levels, deep bass and wide coverage from a small 3" flush and seamless square opening that incorporates a single light fixture into a common one piece aluminum grille. James SA Series speakers are essentially hidden, yet provide the complete musical experience. Each unit has been engineered to integrate a multitude of designer demands, providing a no compromise design solution for the meticulously artful and audio enthusiast alike.

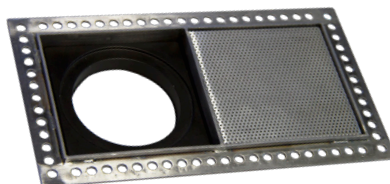

The point source mid/high module provides excellent off-axis response and the built-in mini PowerPipe woofer generates bass down to 38Hz for a truly full-range music experience - yet the user only sees a 3" square or round seamless flush opening. The 53SA-4-1L includes a customizable light fixture, so a custom trim/grille is required to match the speaker and the LED lighting module.

Order woofer assembly, mid-range module, grille kits, and LED fixture sold separately.
