

Kaiosrt

Revision:

kaiosrt-v2.5-ubuntu_Oct18 (Oct. 2018)

kaiosrt-v2.5.en-US.mac64_Oct18 (Oct. 2018)

Release note:

1. Support Ubuntu and Mac.
2. By design:
 - 1) Only support system and basic app (settings) for development
 - 2) No virtual cursor supported
 - 3) “Remote runtime” is not working since the runtime is in local, no need remote connection, this item will be removed afterward.
 - 4) “Set-top box” is not supported, this item will be removed afterward.
 - 5) Only support PC keyboard to type text.
3. Known issues:
 - Simulator keyboard and PC keyboard can't work sometimes
 - 1) [Mac] Can't use Simulator number key(including 0~9, #, *), it will cause crash.
 - 2) Can use the PC keyboard (up/down/left/right key) to scan the Settings menus, but can't turn on/off the BT
 - Screenshot function is not working.
