

Prepare for the Unexpected!

Medical Emergency Preparedness

**A life-threatening medical crisis can occur at any time.
Are you and your team prepared to manage the unexpected?**

With the increase of medically compromised patients presenting for dental treatment, it is essential that dental healthcare providers understand how to respond to medical emergencies. This course discusses the common medical emergencies that occur in a dental setting, their associated signs and symptoms, and how to effectively create and implement a medical emergency response plan.

Participants will receive detailed instruction on adopting a uniform medical assessment process for each patient visit that creates shared language and expectations. We will explore framework to educate providers on the importance of obtaining a thorough medical history assessment.

Ask about India's optional 20-minute interactive experience, where attendees explore "hands-on" stations to simulate the management of medical emergencies.

LEARNING OBJECTIVES

- Recognize how to perform a compliant medical history assessment for each patient
- Review signs and symptoms of common medical emergencies experienced during a dental visit
- Discuss the components and implementation strategies of a response plan
- Identify the equipment required when performing intervention efforts
- Describe proper protocols and team dynamics when implementing a medical emergency response
- Explain how to effectively document the intervention response in the patient's health record
- Optional: Demonstrate an understanding of how to use the required medical emergency equipment through an interactive "hands-on" simulation

SUGGESTED AUDIENCE:

All Dental Professionals

SUGGESTED FORMAT:

Partial Day;
Lecture, Workshop, Keynote
