

The Human Edge in an AI World

What to Automate. What to Keep.

AI is no longer sitting on the sidelines of work. It is actively working alongside us: writing, analyzing, creating, recommending, and responding, often faster than people can decide how, when, or whether to use it.

For organizations and their leaders, the challenge is no longer simply learning the newest tools. The harder question is this: What should we hand over to technology, what should we hold onto, and where do human judgment, connection, and context matter most?

In this thought-provoking and practical keynote, Dr. Janel Anderson explores how AI is redefining work and where humans provide greater advantage. Drawing on her expertise in leadership, workplace communication, systems thinking, and the future of work, she introduces a simple framework for making smarter decisions about the human–AI divide.

Participants will learn how to identify work that is well suited to AI, recognize the moments where distinctly human capabilities add the greatest value, and design everyday interactions that strengthen trust, empathy, meaning, and connection.

The future of work will not be defined only by what AI can do. It will be shaped by the choices we make about what humans should continue to do—and do especially well.

BOOK THIS KEYNOTE

Key Takeaways:

- ✓ Distinguish between work that is well suited to AI and work that benefits most from human judgment, context, and connection.
- ✓ Apply a practical framework for deciding what to automate, augment, or keep distinctly human.
- ✓ Recognize the human capabilities that become more valuable as AI increasingly participates in the work itself.
- ✓ Design everyday interactions and workflows that use AI to create more time and attention for the human interactions that build trust, empathy, meaning, and genuine connection among humans.
