In the change column, a positive value indicates an increase since the previous study.
 A negative value indicates a decrease relative to the previous study.

Due to rounding errors, percent values may vary by 0.1 %

World Health Organization Body Mass Index Classification
BMI = WHO Classification

BMI has some limitations and an actual diagnosis of overweight or obesity should be made by a health professional. Obesity is associated with heart disease, certain types of cancer, type 2 diabetes, and other health risks. The higher a person's BMI is above 25, the greater their weight-related health risks.
