Reference Range - Units

Urea Breath Analysis (H Pylori)

Helicobacter Pylori Breath Test

Result

NEG

A negative test will occur in <5% of active gastric H.pylori infections (false negative). A negative test six weeks after H.pylori treatment indicates eradication. Antibiotics, proton pump inhibitors, H2 receptor antagonists, bismuth salts and antacids may cause false negatives. For further information, consult the Biochemist on call.

Results should be interpreted in the context of patient's medications, many of which may produce a false negative result. Refer to H. pylori Patient Instructions at www.LifeLabs.com
