Dragonfly Wallpaper Download Instructions (For Your Audience)

Last updated: 2026-03-03

Use these steps after you download the dragonfly wallpaper to your iPhone.

1) Download and save the image

1. Tap the download button/link for the wallpaper.
2. If prompted, choose Save Image (or Add to Photos).
3. Open Photos and confirm the image appears in your Camera Roll/Recents.

2) Set as your wallpaper

Method A (Settings):

4. Open Settings → Wallpaper.
5. Tap Add New Wallpaper.
6. Tap Photos and select the dragonfly wallpaper.
7. Adjust the position slightly if needed.
8. Tap Add.

Choose one option:

- Set as Wallpaper Pair: uses the image for both Lock Screen and Home Screen (simple + cohesive).
- Customize Home Screen: lets you choose a different Home Screen background (or keep only the Lock Screen).

3) Helpful tips (so it looks right)

- If the image looks too zoomed: pinch OUT slightly to show more of the artwork.
- If the image looks too small: pinch IN slightly, but avoid cutting off wings.
- Turn OFF Depth Effect / Perspective if the image shifts or crops unexpectedly.
- Note: iPhone lock screen icons (camera/flashlight) and the clock sit on top of the wallpaper. The artwork is designed to look good with those overlays.

4) If you get stuck on the Add screen

- If you see Cancel and Add and nothing seems to move: you are in wallpaper preview mode. Tap Cancel to exit, or lock/unlock your phone.
- If Settings feels frozen: swipe up to close Settings, then reopen and try again.
