Opening Survey (1/3)

036

Do you think target to achieve net zero carbon nationally by 2050 is ambitious enough?

Yes

No

Opening Survey (2/3)

038

Do you think we can achieve net zero carbon nationally ahead of 2050?

Yes

No

In your view what should be the biggest priority for reducing CO2 emissions in the UK?

(1/3)

- Better transport links from population centres to businesses/offices. I lived in London for 4 years without the need for a car. Integrated payment system such as oyster across all public transport.
- Renewable energy growth
- Showing people the benefits in reducing their CO2 emissions.
- Two key areas that have the biggest emissions: Transport & Buildings - Improve existing national building stock to minimise emissions - High standards for new buildings - resi & non-resi (also avoids future retrofitting)
- Decarbonising energy
- The biggest CO2 saving would be in construction especially eliminating portland cement production and importation
- Reducing vehicles but investing in power generation

In your view what should be the biggest priority for reducing CO2 emissions in the UK? (2/3)

- E mode of all transport.
- Fabric First Approach.
- transport
- Complete overhaul of transport policies
- Housing abs vehicles
- Energy
- Retrofitting existing dwellings and buildings
- Improving current housing stock
- Electric car use
- The cost of electric cars
- Policy alignment, the correct level of incentives, industry collaboration and shared delivery projects at demonstrator to prove case and deliver early wins
- Stricter legislation
- Buildings both new and Retrofit
- Retrofitting, decarbonising transport and move away from fossil fuels
- Transportation
- Retro Fitting all housing and holding

Opening Survey (3/3)

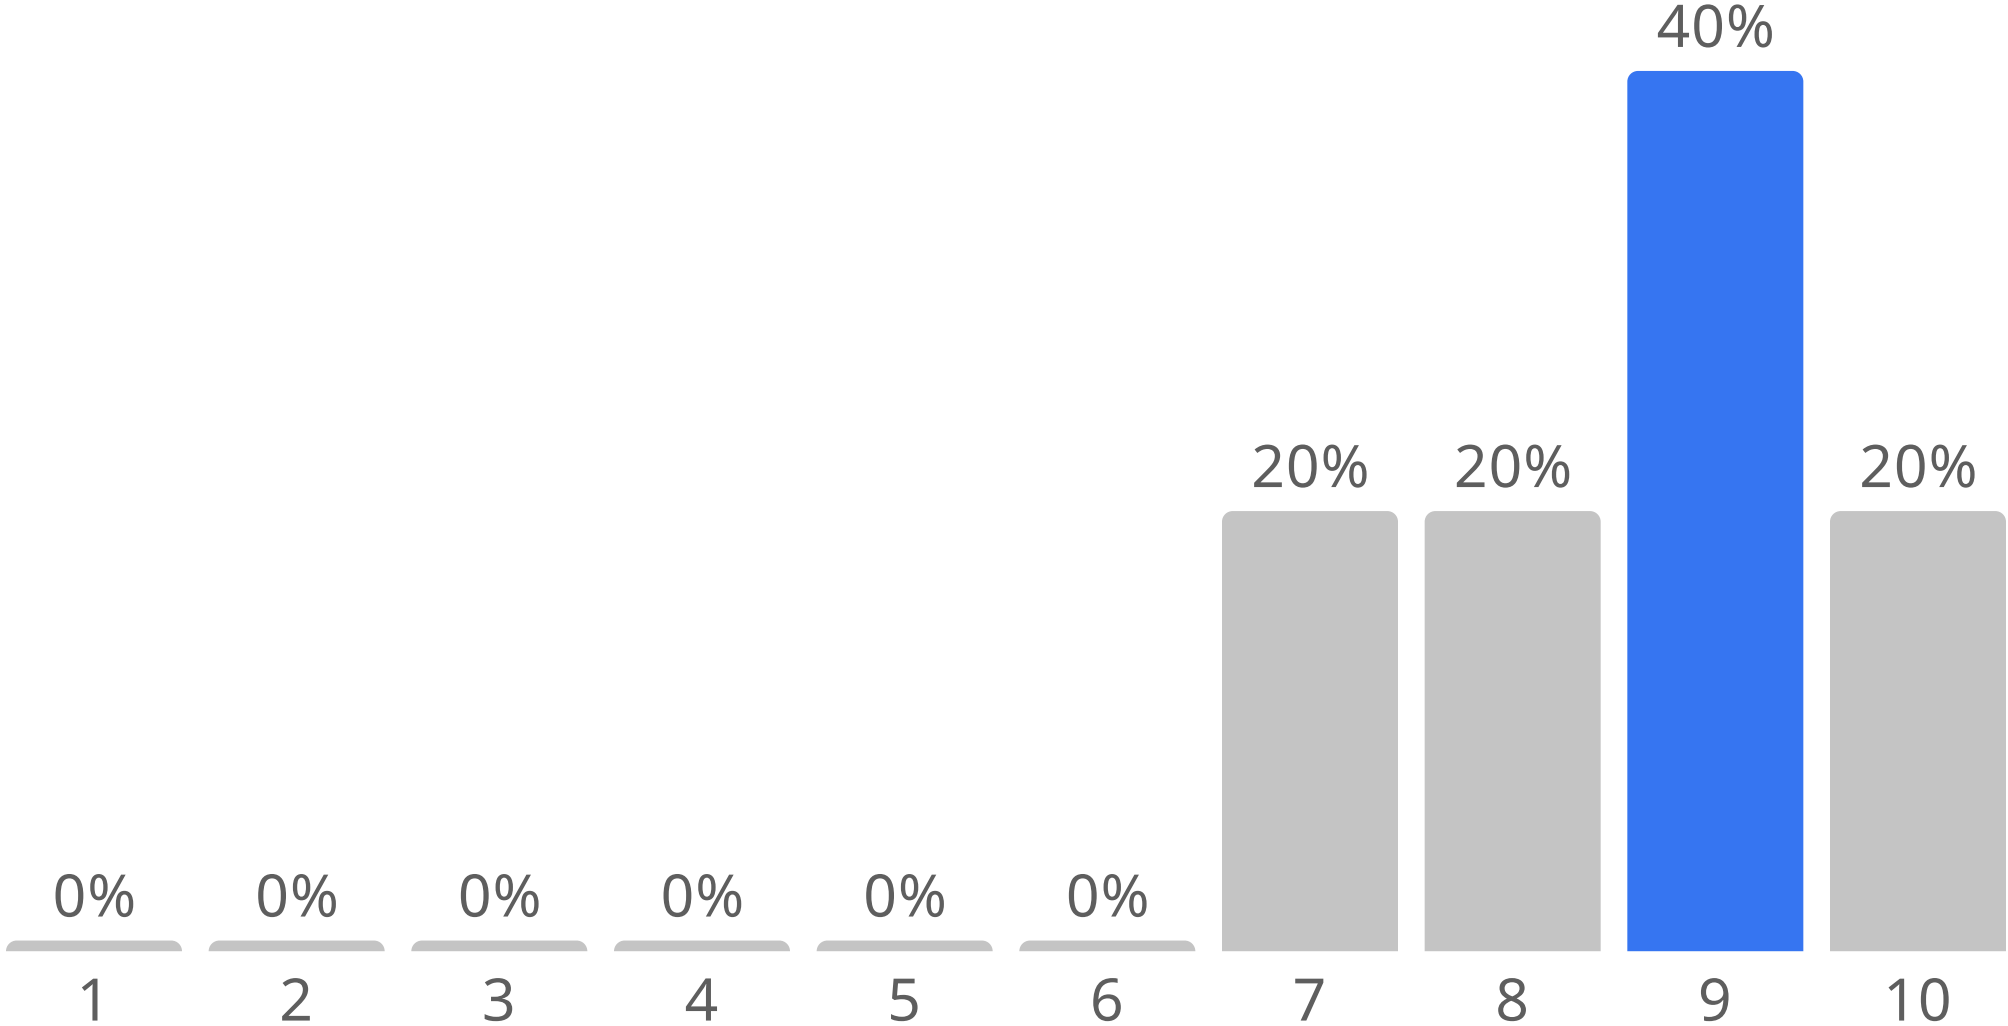

0 3 1

In your view what should be the biggest priority for reducing CO2 emissions in the UK? (3/3)

- a public debate about DeGrowth
- Transport
- New build standards and investment in existing homes
- Transport emissions, and taking account of the carbon associated with British imports and exports
- buildings and their energy consumption
- Increase the use of building products with low embodied timber credential I.e. timber
- Transport
- Building
- existing housing stock

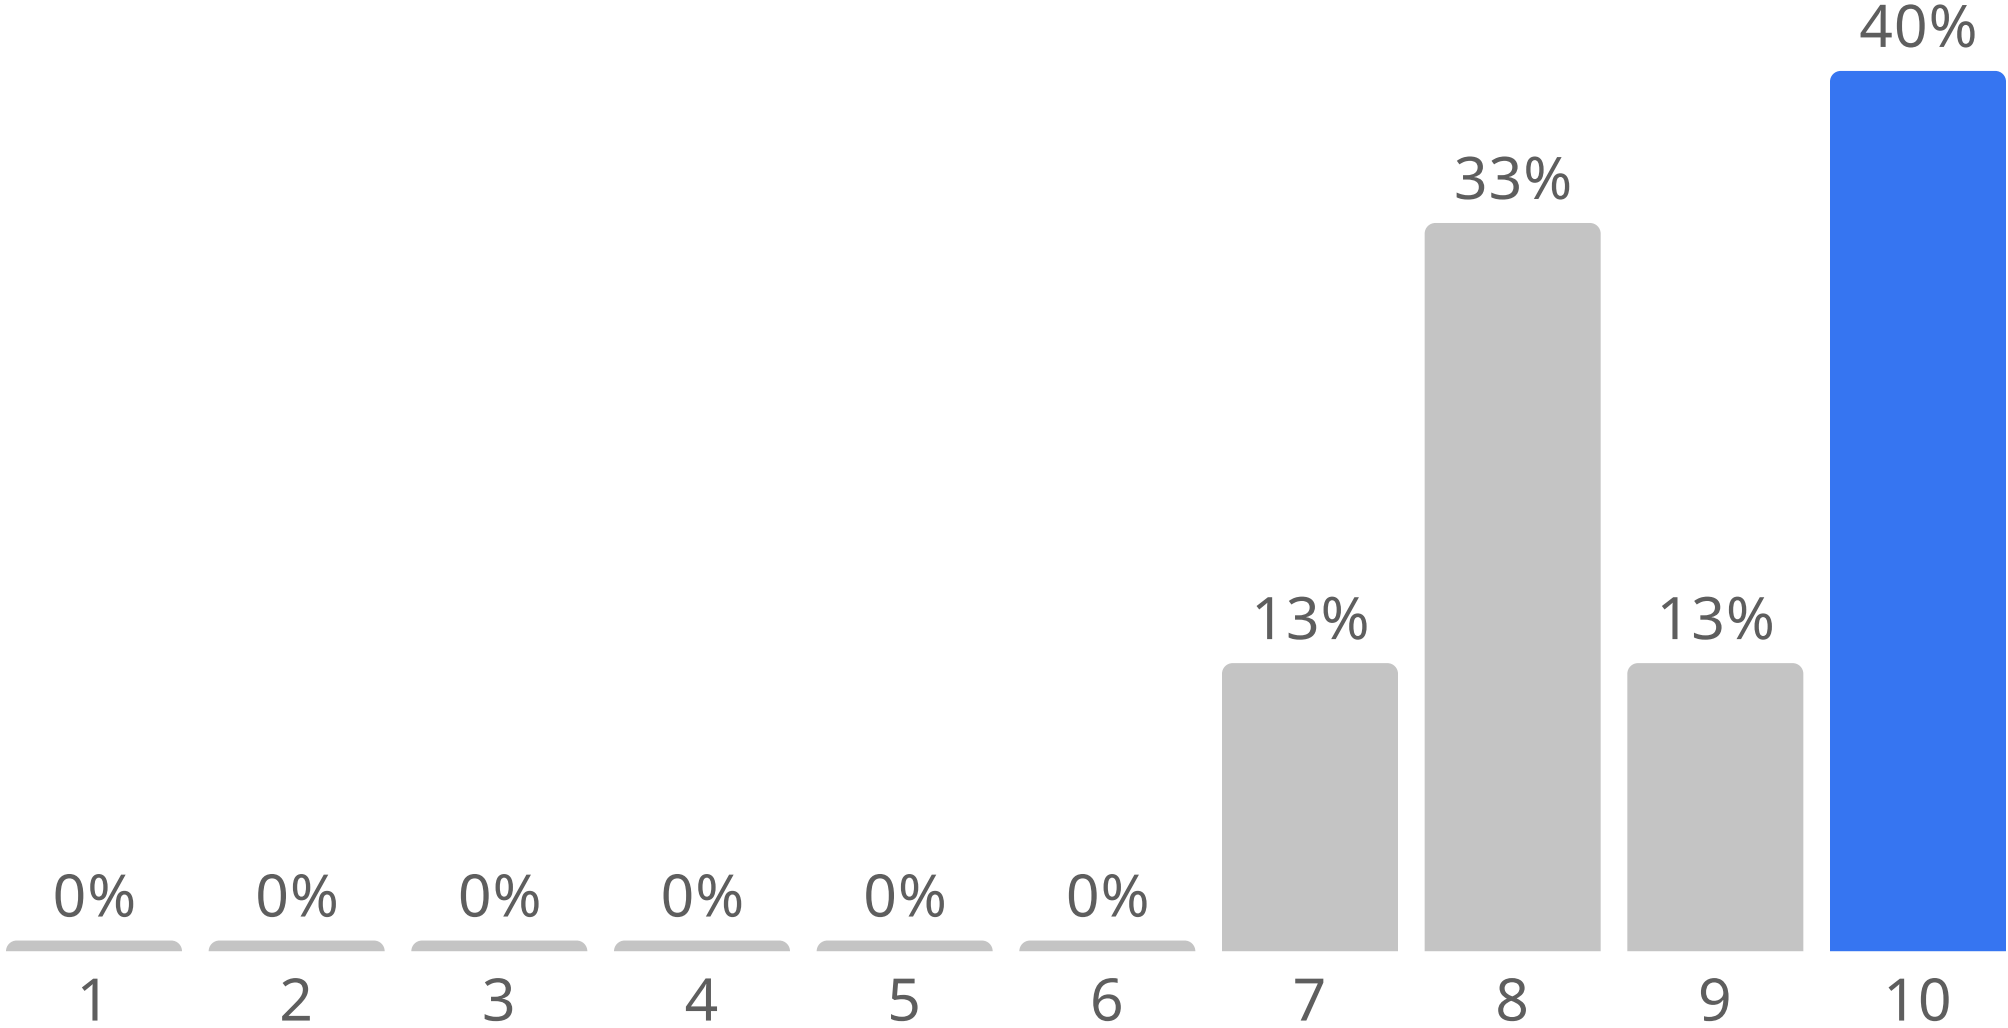

This session held my interest

Score: 8.6

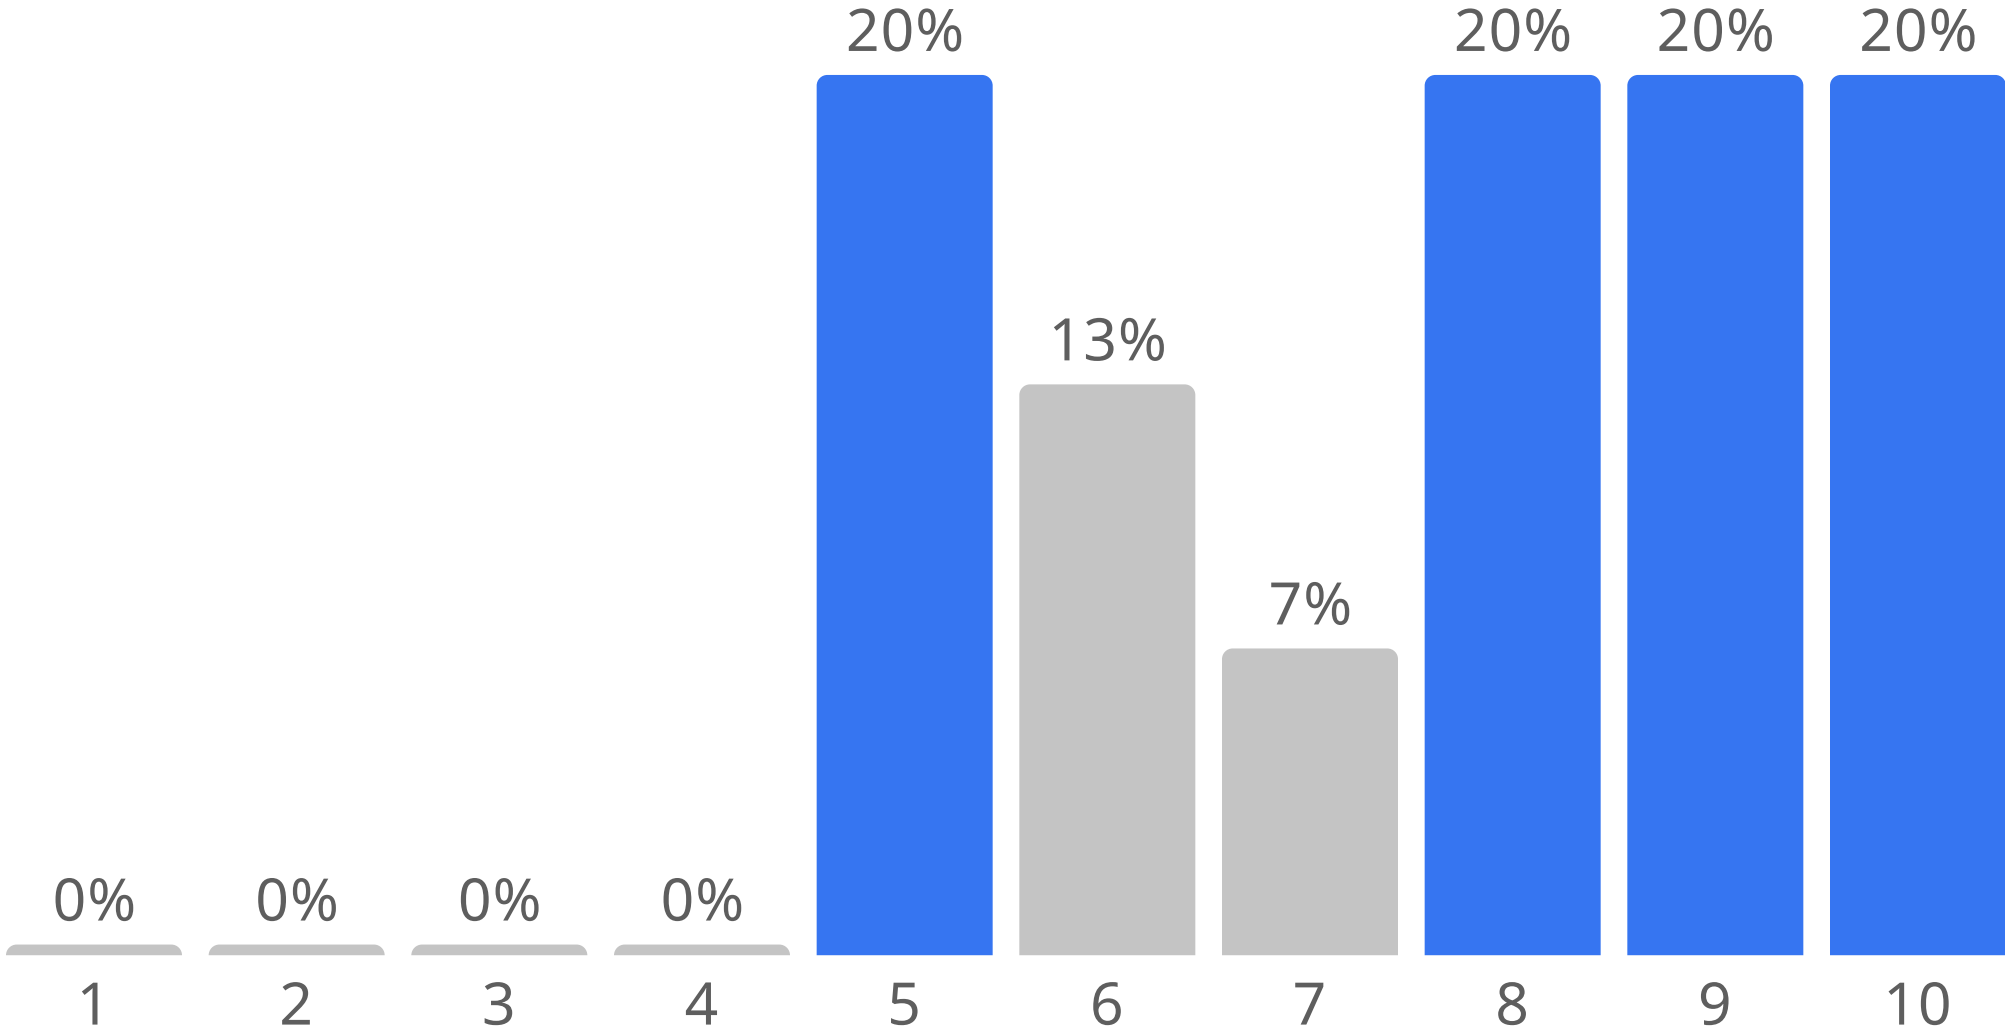

I was encouraged to participate

Score: 8.8

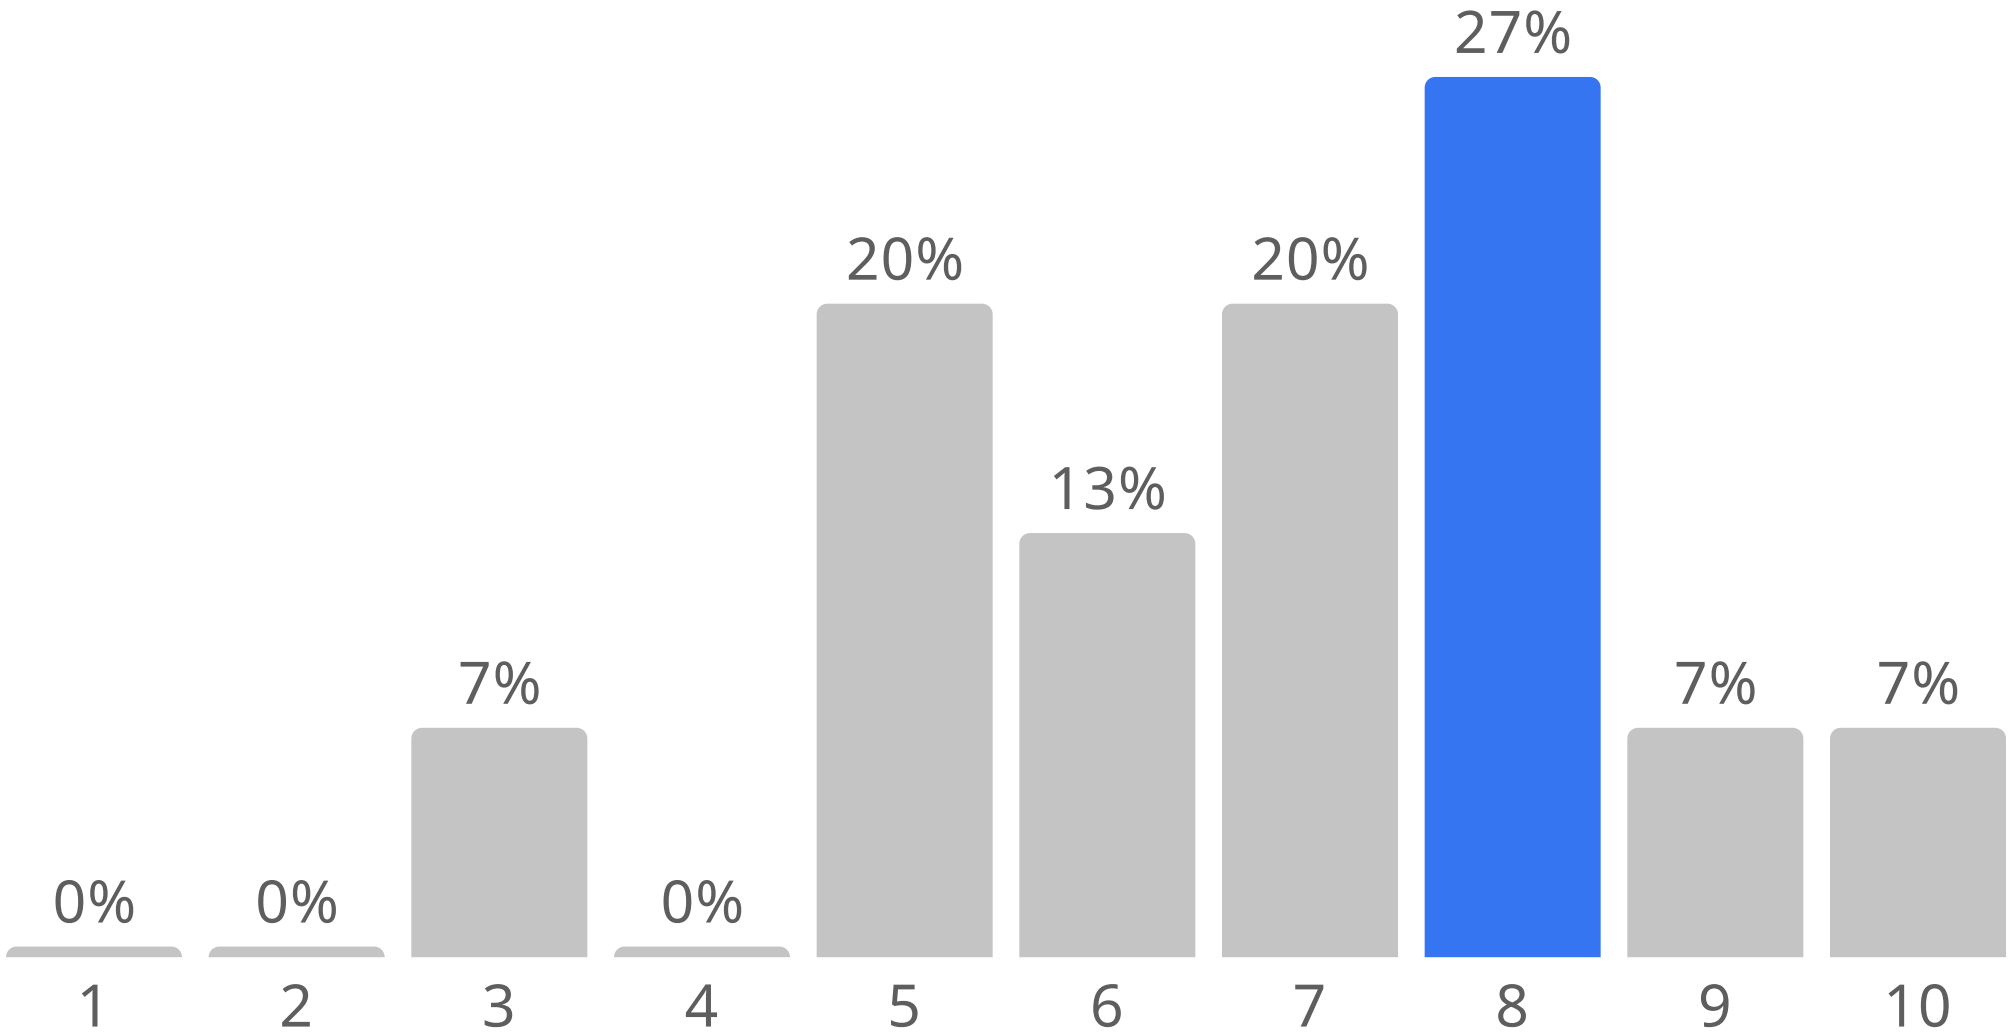

The content was pertinent and relevant to my role/work

Score: 7.7

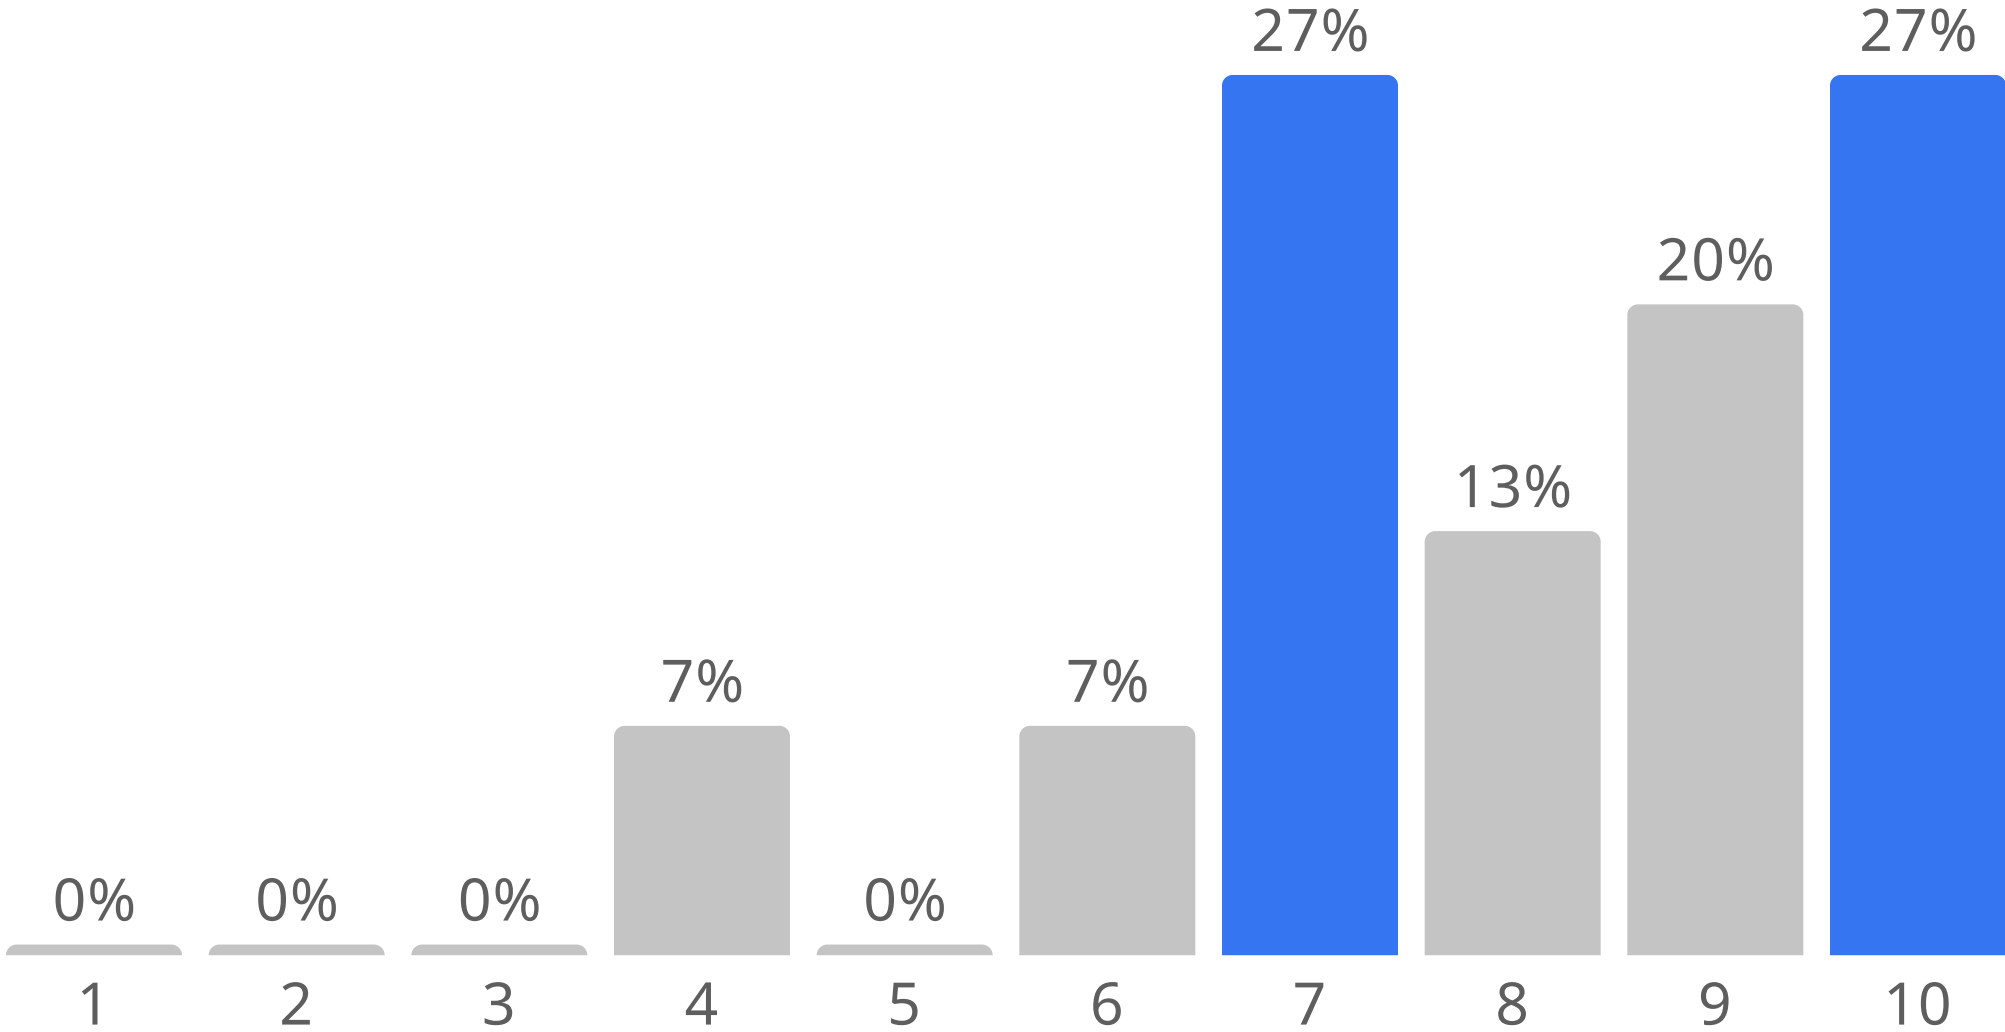

What I learned will help me in my role/work

Score: 6.8

I will recommend others who did not attend this session to watch the recording

Score: 8.1

How could this session be improved in future?

- Will there be a move to Microsoft Teams in future?
- Pretty slick so not much to suggest
- Within in an hour you cannot do more.....
- I find thinking about an answer to an open question distracts from listening to the presentation. Maybe I should revisit the recording of the meeting.
- All good, well timed, useful content and balance.
- The next session will inevitably build on this, so a health check at the start dating how much you have achieved (a sort of running total) to keep people positive and setting progress.

Are there any other comments you would like to add?

(1/2)

- Thank you for the webinars. It's interesting to see the speakers reactions to the polls. It is often difficult for speakers and a relevant audiences to get instant feedback and I think that is one of the big plus points in your presentations. It would be good for the speaker to post a question as well as the LM team. I work in the Housing department of Cardiff Council. I am also a self builder engaged in building a "hemp" house which should be carbon neural in the construction.
- Is it possible to get Maria's email please?
- Thank you for holding the sessions. Valuable.
- Keep up the good work.
- 1st time attending this
