## Equine Behaviour and Research Questionnaire (E-BARQ)

### PARTICIPANT INFORMATION STATEMENT

#### (1) What is this study about?

You are invited to take part in a research study about horse behaviour and management. The study is designed to gather information on how we manage and handle horses and to investigate how these practices affect behaviour. E-BARQ is the first survey of its kind to cover multiple aspects of horse behaviour and training and it follows in the footsteps of the very successful C-BARQ that has already proved so useful to dog owners, enthusiasts and professionals.

You have been invited to participate in this study because you are a horse owner and familiar with your own horse's behaviour. This Participant Information Statement tells you about the research study. Knowing what is involved will help you decide if you want to take part in the research. Please read this sheet carefully and ask questions about anything that you don't understand or want to know more about.

Participation in this research study is voluntary.

By giving your consent to take part in this study you are telling us that you:

- ✓ Understand what you have read.
- ✓ Agree to take part in the research study as outlined below.
- ✓ Agree to the use of your personal information as described.

You can download a copy of this Participant Information Statement to keep.

#### (2) Who is running the study?

The study is being carried out by the following researchers:

Kate Fenner is conducting this study as the basis for the degree of PhD at The University of Sydney. This will take place under the supervision of Prof Paul McGreevy.

**(3) What will the study involve for me?**

The survey will ask you questions about your horse, starting with your horse's age and breed and then moving on to particulars about your horse's behaviour. We know that you know your horse better than anyone, so you are the best person to describe your horse's behaviour as well as details about how your horse is housed and trained.

Several factors effect how we manage our horses and E-BARQ will gather demographic information about you as a horse owner or handler, including questions relating to your personality, gender and country of residence.

Many people have more than one horse and you are welcome to do a separate survey for each horse that you own but we suggest starting with the horse you spend the most time with. There are separate sections for ridden and non-ridden (companion, young, breeding or resting) and you will be presented with only the questions that apply to your particular situation.

If you own or lease a horse, you are welcome to complete the survey. We will ask for your email address so that we can send you a follow-up survey in 6 months' time, which will enable you to record any changes in your horse's behaviour. Your email address will be securely stored at Sydney University and not used for any other purpose. If you do not wish to take the follow-up survey, and you are under no obligation to do so, you can simply ignore the email.

**(4) How much of my time will the study take?**

The survey should take about 20-30 minutes to complete and is in a tick-box format with no requests for answers that require typing.

**(5) Who can take part in the study?**

If you own or lease a horse or have regular contact with and control over a horse's management and training, you can take the E-BARQ survey.

**(6) Do I have to be in the study? Can I withdraw from the study once I've started?**

Being in this study is completely voluntary and you do not have to take part. Your decision whether to participate will not affect your current or future relationship with the researchers or anyone else at the University of Sydney.

Submitting your completed questionnaire is an indication of your consent to participate in the study. You can withdraw your responses if you change your mind about having them included in the study, up to the point that we have analysed and published the results.

If you decide to take part in the study and then change your mind later, you are free to withdraw at any time. You can do this by ignoring the follow-up email or replying to that email requesting withdrawal. There are no consequences to withdrawal from the survey.

**(7) Are there any risks or costs associated with being in the study?**

Aside from giving up your time, we do not expect that there will be any risks or costs associated with taking part in this study.

**(8) Are there any benefits associated with being in the study?**

While there are no direct benefits to being involved in the study, you will be contributing to the body of knowledge on horse behaviour and training and helping to improve horse welfare in the long term. If you decide to do the follow-up survey, you will also be able to see how changes in your management and training affect your horse's behaviour.

**(9) What will happen to information about me that is collected during the study?**

The only piece of information about you will be an email address for the purposes of notifying you when the follow-up survey is available for you. This will not be shared with others. It will be kept within Sydney University's secure data base.

At the end of the survey, you will be able to compare your horse's behaviour to others that have been described via the E-BARQ. When we have gathered a significant number of responses, results will be analysed and they will appear in journal publications.

By providing your consent, you are agreeing to us collecting personal information about you for the purposes of this research study. Your information will only be used for the purposes outlined in this Participant Information Statement, unless you consent otherwise.

Your information will be stored securely and your identity/information will be kept strictly confidential, except as required by law. Study findings may be published, but you will not be individually identifiable in these publications.

We will keep the information we collect for this study, and we may use it in future projects. By providing your consent you are allowing us to use your information in future projects. We don't know at this stage what these other projects will involve. We will seek ethical approval before using the information in these future projects.

**(10) Can I tell other people about the study?**

Yes, you are welcome to tell other people about the study.

**(11) What if I would like further information about the study?**

When you have read this information, Kate Fenner will be available to discuss it with you further and answer any questions you may have. If you would like to know more at any stage during the study, please feel free to contact Kate Fenner at [kfen3285@uni.sydney.edu.au](mailto:kfen3285@uni.sydney.edu.au)

**(12) Will I be told the results of the study?**

You have a right to receive feedback about the overall results of this study and will do so immediately after completing your survey. You can also tell us that you wish to receive further updates on how E-BARQ is progressing by going to [www.e-barq.com](http://www.e-barq.com) and completing the Newsletter form on that page. Newsletters will keep you up-to-date on how the study is progressing, findings and identify journal articles involving E-BARQ.

Your individual results will be available to you on completion of the survey and, once entered into the system, no individual results will be accessible to others.

**(13) What if I have a complaint or any concerns about the study?**

Research involving humans in Australia is reviewed by an independent group of people called a Human Research Ethics Committee (HREC). The ethical aspects of this study have been approved by the HREC of the University of Sydney 2012/656. As part of this process, we have agreed to carry out the study according to the *National Statement on Ethical Conduct in Human Research (2007)*. This statement has been developed to protect people who agree to take part in research studies.

If you are concerned about the way this study is being conducted or you wish to make a complaint to someone independent from the study, please contact the university using the details outlined below. Please quote the study title and protocol number.
