

Infection Control for Dental Professionals

Rules, regulations and requirements galore! Regulatory agency guidelines both overlap and overwhelm. *How can you be sure your dental practice is not only compliant but also effective in stopping the spread of disease?*

Never before has the threat of disease transmission been more apparent than during the COVID-19 pandemic. When confronted with pathogens such as Covid-19, Hepatitis B, HIV (and more), it is an opportunity to evaluate and improve our infection prevention practices. Many dental professionals find it challenging to cut through the mounds of regulations to clearly understand the Minimum Standards for Infection Control.

In this interactive course designed for the clinical dental team, participants will evaluate and harness the power of habit to make practical and lasting improvements to disinfection and sterilization routines. Develop your compliance checklist, explore an agenda for your team safety meetings, and discover resources for infection control products.

Gain the practical skills and understanding to exceed patient expectations and ensure their safe visit to the dental office.

LEARNING OBJECTIVES:

- Review the 24 minimum standards for infection control and recognize how they protect both patients and team
- Evaluate and update your infection prevention protocol through a current, comprehensive understanding of the law
- Assess your habits, identify deficiencies, and gain strategies to elevate your efficacy
- Enhance and support the role of the infection control coordinator in your practice

Suggested Format: 2 Hours

Suggested Audience: Dental Clinical Team

These courses are approved by the Dental Board of California and meet the mandatory license renewal requirement. Provider number RP5496
