## Episode 20: Time Travel

### Methods:

Here's a short list of some scientific theories:

Black holes, infinite cylinders, time machines, cosmic strings, and wormhole travel.

### Grandfather Paradox:

The grandfather paradox raises problems in effecting the time/space continuum. The Grandfather Paradox illustrates issues with disrupting what has already happened in time and space by going back. What happens if you go back in time and kill your grandfather...then you cease to exist. Or as some theorists suggest, you exist but the time traveling death of your grandfather creates \*another\* dimension to contain the new timeline his death creates. Some people theorize that even the smallest, most seemingly inconsequential change in the timeline affects the present....which then leads to the butterfly effect.

### Examples of Time Travel:

Hipster at the 1941 Bridge Opening and The Moberly -Jourdain Incident
