For release on May 4th 2020

3D Printing for Entrepreneurs

The highly-efficient, application-focused, online course by Addmio.

Eindhoven, April 29th, 2020 – The 3D printing industry is at a turning point, technologies are becoming faster and more affordable than ever. Professional 3D printing is becoming accessible for the wider public but there is one aspect that is almost entirely overlooked. Education.

This is why we created an online educational platform and started developing our first course, **3D printing for Entrepreneurs**. Three unique aspects of this course are;

- **Highly-efficient** The course condenses 5 years of work floor 3D printing industry experience in 3 days.
- **100% online** The course is web-based and mobile-first so you can learn everywhere all the time.
- **Application-focused** The course teaches how to select the right application and shows many examples.

"I started Addmio to help the 3D printing industry flourish and to educate all of the entrepreneurs and creatives worldwide. I want to help them to create better products and businesses with 3D printing"
Robin Huizing, founder of Addmio

In my previous work, I've taught and trained hundreds of people in 3D printing. Gave presentations, lectures, workshops, and masterclasses, to some of the biggest companies in the world. But after a while, I realized that I was not making a difference. These ways of sharing knowledge were not scalable.

I started researching training programs and courses and noticed that the quality courses were often lengthy, on location, and very expensive. Affordable courses were often of poor quality and only contained general information. I decided to start a company to offer high quality, application-focused courses for creators around the world.
Because we can make our courses available for thousands of people at the same time, we can keep the costs very low. The value for money we're able to offer is unparalleled.

We chose to crowdfund because it seamlessly fits our philosophy. Instead of working with banks or investors, we are reaching out to creators around the world, our community. And in return, we will help them to create successful 3D printing businesses.
Next to the course, we're also offering 3D printable files and a Startup support program. In this program, we're helping startups that use 3D printing by listening to their challenges and provide them with a tailormade Advisory report with tips and advice.

We'd like to give everyone the opportunity to be part of our launch by funding our campaign. People that will fund $89 or more will get the course 3D Printing for Entrepreneurs in return. The campaign will be launched via Kickstarter.com on Monday, May 4th at 9 am PT.

Addmio
Addmio is an eLearning company, focused on 3D printing and based in Eindhoven, the Netherlands. The company is founded by Robin Huizing who worked for several years at Shapeways and Additive Industries.
