

COUPLERS & CONNECTORS

Coilflow™ Six Ball Couplers

The Coilflow Six Ball Couplers feature six stainless steel locking balls to provide a more precise and secure connection. The larger contact area provided by the six balls allows for minimal movement between the coupler and the connector. This configuration provides a more durable coupler, even in high vibration conditions. Available in Manual and Automatic

Coilflow™ Manual Couplers

The Coilflow couplers are engineered to connect to all connectors of a matching interchange. They are composed of either brass or plated steel.

Coilflow™ Automatic Couplers

The Coilflow Automatic Couplers allow for easy one handed connecting and disconnecting. They feature a rugged brass body, and are compatible with all connectors of the same interchange.

- Made in USA
- CNC machined precision
- Drag Guard prevents accidental disconnection
- Compatible with all connectors of the same interchange

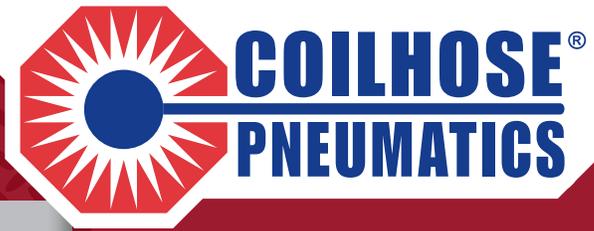

- Made in USA
- Drag Guard prevents accidental disconnection
- Knurled body assists with connection in wet or oily environments
- Available in thread or hose barb configurations

- Made in USA
- Easy one handed connection
- Brass construction

COUPLERS & CONNECTORS

5-in-1 Safety Exhaust Coupler

The 5-in-1 allows for one coupler to connect to five interchanges. Designed to disconnect under zero pressure, this coupler avoids the dangerous and dreaded rush of air and whipping hose.

Ball Swivel Connectors

When installed in a tool, the Ball Swivel Connectors allow for a larger range of motion and less fatigue on the user. These fittings also feature steel ball and socket construction which prevents galling and ensures a long service life.

Non-Marring Composite Couplers

The non Marring composite couplers are manufactured out of a heavy duty composite which protects from scratching or marring surfaces. This coupler is great for body shops or finish carpenters who are worried about damaging their work.

- Connects to multiple interchanges
- Safely disconnects under zero pressure
- Easy one handed connection
- Available in all of the popular interchanges
- Made in USA
- Full flow at any angle
