

Version 4.07 Release Notes

New Functionality:

Web links to the *Sketchpad* Resource Center, information about Add-On Curriculum Modules, and the standard *Sketchpad* Sample documents are now all available from the Help menu.

- Mac OS X) *Sketchpad* is now a Universal Binary application for native performance on both Intel and PowerPC architectures.

New Sample Document:

Samples | Sketches | Geometry | Tessellations.gsp

Revised Sample Documents:

Samples | Custom Tools | Sliders.gsp (*added Basic 0..1 Slider*)

Bug Fixes:

Hidden merged text no longer fails to update to current values on first being shown.

Copying/Pasting a Link action button within the same document no longer breaks the link.

Numerical accuracy is improved when initially drawing objects with Snap Points or the Shift key in effect.

Various problems in which font styles and sizes changed unpredictably while editing captions have been fixed.

(Windows) *Sketchpad* no longer consumes 100% of available CPU idle time when animating or editing a caption.

(Windows) Images copied from *Sketchpad* and pasted into other applications now more often appear with their original dimensions intact.

(Windows) TabletPC press-and-hold gesture no longer conflicts with *Sketchpad*'s Toolbox menus.

(Macintosh) Large nested parentheses in mathematical expressions no longer occasionally fail to print.

(Macintosh) Printing now respects a custom page range chosen in the Print dialog box.

(Macintosh) Safari no longer crashes when Searching in *Sketchpad* Help.
