

## KEY ME KEY SHARING

### STEP BY STEP

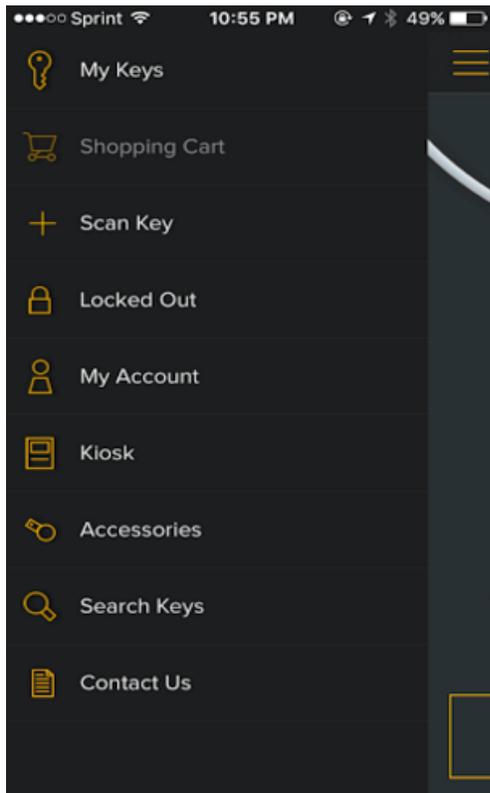

#### Step 1: Get The App

Our app is compatible with iOS or Android Devices. As long as both you and your friend have either an iPhone or an Android, you're good to go! Android users can download the app in Google Play, and iOS users can find it in the app store.

#### Step 2: Create and verify your KeyMe Account

After you've completed the sign-up process, you'll receive an email confirmation that prompts you to confirm your email address. Once this is all set, select "Scan Key" from the drop-down menu. This is when the magic happens.

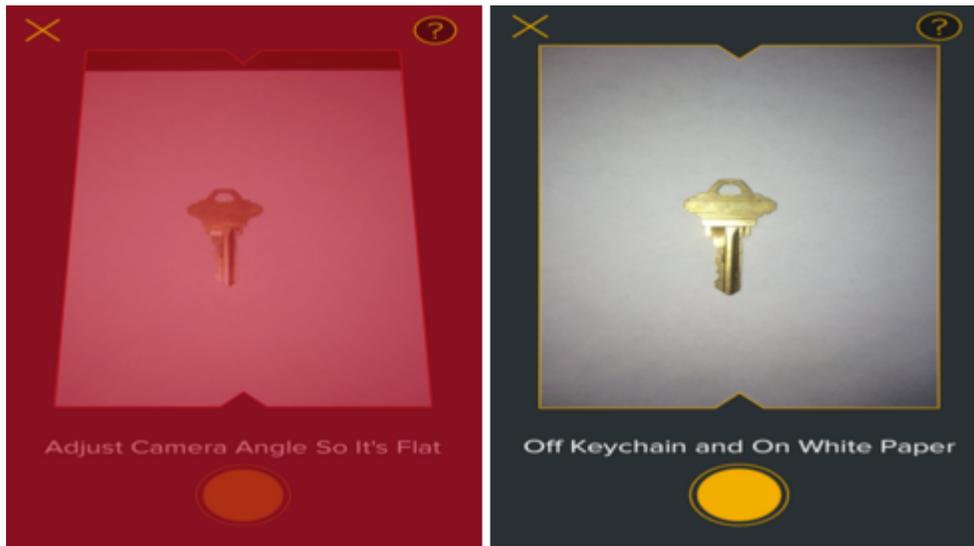

### **Step 3: Remove the key from your key ring and place on a white sheet of paper**

Removing your key from the Keychain is required to prevent what we call, ‘flyaway keys.’ This is where a person can potentially snap a quick photo of your key in hopes of saving and duplicating. We’ve purposely made it harder for folks looking to use our app for evil. No worries here, we’ve got your back!

### **Step 4: Make sure your device is aligned perfectly with your key**

If the app displays a red highlight, this just means you have to perfect your angle. A few turns in the right direction do the trick. Also, it’s extremely helpful to allow your camera time to adjust before snapping the shot and initiating the scan.

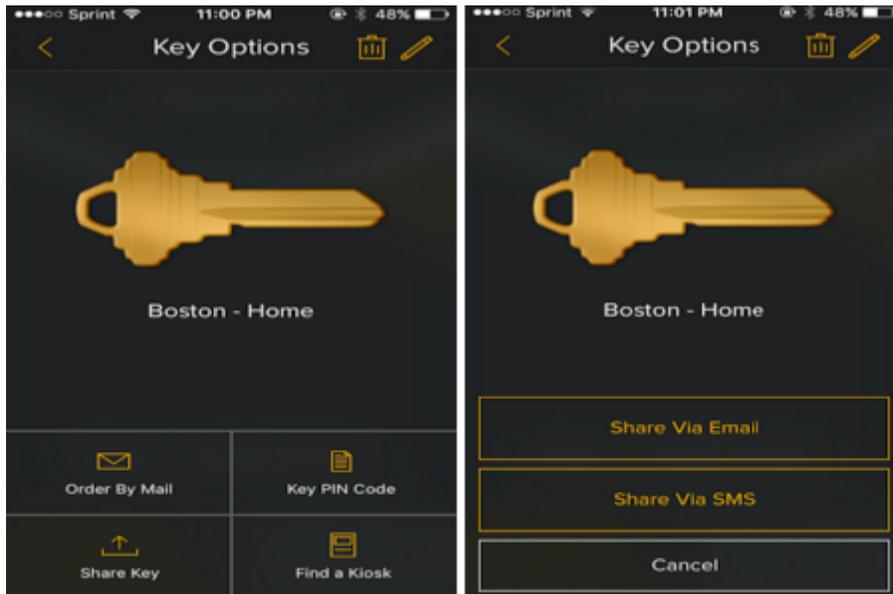

### **Step 5: Scan & compare!**

If your image is clear, and looks similar to the prototype on the left then you're good to go! Your scan doesn't have to look identical, however it should be clear and close enough to identify the cuts on your key.

### **Step 6: Share your your key via Email or SMS**

Once the key has gone through the analyzing stage, and is saved onto your digital key ring, your keys can be accepted or sent via email or text, and can only be confirmed on your mobile device. Simply tap your key and select Share Key.

### **Step 7: Confirm Share:**

If you're accepting a shared key, you will receive an email or text with a link enclosed. Once you select the link, it'll direct you to a page where you have to verify the device you're using. *Hold* your finger on the device option until the pop-up menu appears.

### **Step 8: Confirm Phone Number or Email address**

This is the very last step in this process! In order to officially accept the key, you would just have to confirm your phone number or email address- however the key shared & that's it!

Now that your keys have been shared (or saved), you can locate a kiosk in your area by selecting "Kiosk" in the drop down menu on the home page. Don't see any locations in your area? Not to worry! If you need a copy of your keys ASAP, you can purchase your key's code. This will allow you to visit your local locksmith, where they will cut your key using the code- no key necessary! If you're in no rush, but would like a few copies of your keys in case of an emergency, you can place an order directly from the app! Again, hassle free.

Scan, share & smile with the KeyMe key duplication app today!
