The first international conference on Functional Imaging and Modeling of the Heart (FIMH) was held in Helsinki, Finland, in November 2001, thanks to the strong scientific collaboration between France and Finland. This event was a first attempt to federate the heart imaging community and to encourage collaboration between scientists in signal and image processing, applied mathematics and physics, biomedical engineering and computer science, and experts in cardiology, radiology, biology, and physiology, in Europe and beyond. The conference has encountered considerable success. The outstanding research works presented have demonstrated a very active research field with complex modeling and image analysis problems to be solved. One of the outcomes was the special issue of the Medical Image Analysis journal based on a selection of the conference's best papers, to appear in the second half of 2003. The FIMH 2001 meeting was the starting point of a discussion for federating the European research effort in cardiac imaging, heart modeling, and cardiac image analysis. It was very successful, and a large coalition was created around the e-Heart proposal for a Network of Excellence in the European Sixth Framework Program. The e-Heart network has already gathered about 200 researchers from 100 institutes. A project proposal has been submitted to the European Union. It was decided in the first meeting to organize a regular biennial conference.

Publication Overview - Advances In Theory And Practice: 11th International Workshop, Asm 2004, .. 2003, Proceedings (Lecture Notes In Computer Science) (V. 5); LNCS 2810, 2003, Springer. 4th International Conference, Visual 2000, Lyon, France, November 2-4, ...
