Frozen Vegetables Market Sector Values in Poland

established 1974, a brand since 1981.

www.datagroup.org

This research provides Market Sector Values data on Frozen Vegetables in Poland. The limitations of the eBook format means that this document is only a very small extract of the main database and provides limited data for Poland. More complete data is available as a World Summary PDF Edition; as well as several Database Editions which cover the World, Regions and individual countries. Readers can order any other Database Editions, or the full World Database Edition, from the After-Sales Service.

Sector: Frozen Vegetables

Database ID: P20372_L_Frozen Vegetables Market Sector Values in Poland

Base Database: P20372_L

The Frozen Vegetables Poland eBook provides 14 years Historic and Forecast data on the market for each of the 20 Products and Markets covered. The Products and Markets covered (Frozen Vegetables) are classified by the Major Products and then further defined and analysed by each subsidiary Product or Market Sector. In addition full Financial Data (188 items: Historic and Forecast Balance Sheet, Financial Margins and Ratios) Data is provided, as well as Industry Data (59 items) for Poland.

www.datagroup.org

Products & Markets

This report covers the Market Sector Values for the following Product and Market Sectors:-

FROZEN VEGETABLES

P20372_L	Frozen Vegetables
P20372_L00001	Frozen vegetables: Asparagus
P20372_L00002	Frozen vegetables: Green beans, regular and french cut
P20372_L00003	Frozen vegetables: Lima beans, baby emerald and fordhook
P20372_L00004	Frozen vegetables: Broccoli
P20372_L00005	Frozen vegetables: Brussel Sprouts
P20372_L00006	Frozen vegetables: Carrots
P20372_L00007	Frozen vegetables: Cauliflower
P20372_L00008	Frozen vegetables: Green peas
P20372_L00009	Frozen vegetables: Spinach
P20372_L00010	Frozen vegetables: Succotash
P20372_L00011	Frozen vegetables: Peas and carrots

P20372_L00012	Frozen vegetables: Other combinations (mixed veg, peas and onions etc.)
P20372_L00013	Frozen vegetables: French fried potatoes
P20372_L00014	Frozen vegetables: Other potato products (patties, puffs, etc)
P20372_L00015	Frozen vegetables: Sweet cut corn, yellow
P20372_L00016	Frozen vegetables: Sweet cob corn, yellow
P20372_L00017	Frozen vegetables: Southern greens (collards, kale, mustard and turnip)
P20372_L00018	Frozen vegetables: Other frozen vegetables

Product Coding

Product Code / Revenue Line coded reports and databases

This data is from Market databases which are designed to be compatible with U.S. government databases.

The report structures, datasets, field names, et al, are an analogue of U.S. Department of Commerce databases, and the U.S. Census databases. This series of report is designed to provide an analogue of U.S. Census data, but in a worldwide context.

The products are described under their NAICS or SIC Product Codes. This coding systems classifies products within Product Codes.

For a full explanation of the NAICS coding system see: <http://www.census.gov/eos/www/naics/>

For Revenue Lines the NAICS coding system uses a series of Product Code or Revenue Lines where the headline product code is composed of the sum of the underlying codes.

These product / revenue lines codes are of course determined by the U.S. Government agencies.

Data Caveat

The report databases are designed to give a common definition, unit of measure and quantification of markets in over 200 countries. These reports rely on data collection at various levels of the product flow; this effectively means, the producer, the distribution channels and the end user or consumers. This data is then correlated with any national and international statistical data produced by official agencies. Unfortunately, product flow data gathering in some countries is difficult, and furthermore the official statistical data is both inaccurate and sparse. In such circumstances, in some countries, we have to flag a Data Caveat as a warning. What this means is that in some countries the data is not sufficiently verifiable for statistical purposes and in those

cases the data may not be presented.

www.datagroup.org

Product & Market Definitions

The data in this document is a very small extract from an overall database on Frozen Vegetables. The database is an analogue of U.S. Government databases and is usually provided as Excel Spreadsheets and Access Tables. The limitations of the eBook format means that it is almost impossible to render complicated tables of data and therefore the data must be kept short and in simple two or three column tables.

The data provided in this document is a part of the overall data on Frozen Vegetables in Poland. To see the complete datasets in the database please refer to the Chapter covering the [PureData Database](#).

MARKET DATA

The MARKET VALUE figures are provided in REAL TERMS US\$ where the base year is 2018 and all historic and forecast MARKET figures (years) are a REAL TERMS calculation from this base year figure. This enables readers to understand the actual value of the data without the need to make and price inflation or deflation calculations.

The MARKET figures given are synchronized with the Median Market Forecast in the database and not to any of the individual Market Scenario Forecasts. This ensures that one can use a standardized market measure to compare the Financial data and not have the additional complication of interpreting the financial data in relation to the market scenarios.

ECONOMIC LEVEL

It is important to understand exactly what is being measured, and how it is being measured, in the data provided.

Market data is measured at a specific level of economic activity: the Producer level (or the cost of the supply of the goods or services), the OEM or B2B purchasing level, the Wholesale level, the Retail level, or the actual price paid by the End User or Consumer..

The indicator as to the level of economic activity which is being measured is in the database code, and the database code is based on the product definition coding or system being applied.

See: [DataGroup Product Definitions](#)

The databases are designed to show the market value at the product manufacturing / supply costs level.

NAICS Codes

Where the Database Code starts with a 1 to 9 number then this refers directly to one of the NAICS / U.S. Government product definition codes and this data is given at Producer or Supplier level terms, which are:

- Prefix: 1 refer to Agricultural or similar products which are measured at ex-farm or producer level.
- Prefix: 2 refer to Services and Trade Contractors which are measured at User level.
- Prefix: 3 refer to Manufactured Products which are measured at Producer or ex-Factory level.
- Prefix: 42 refer to Wholesale sales which are measured at Trade Buyer level.
- Prefix: 44 - 45 refer to Retail sales which are measured at Consumer level.
- Prefix: 48 - 49 refer to Services which are measured at User level.
- Prefix: 51 refer to Media which are measured at Supplier level.
- Prefix: 52 refer to Financial Services which are measured at Supplier level.
- Prefix: 53 refer to Property Services which are measured at Supplier level.
- Prefix: 54 refer to Professional Services which are measured at Supplier level.
- Prefix: 55 refer to Commercial Services which are measured at Supplier level.
- Prefix: 56 refer to Support Services which are measured at Supplier level.
- Prefix: 61 refer to Educational Services which are measured at Activity level.
- Prefix: 62 refer to Health Services which are measured at Activity level.
- Prefix: 71 refer to Entertainment / Catering / Hospitality Services which are measured at Activity level.
- Prefix: 8 refer to Retail & Consumer Services which are measured at Activity level.
- Prefix: 9 refer to Miscellaneous Products & Services which are measured at Output level.

Therefore the market value of some products will depend on the level at which it is being measured. The market for motor vehicles can be measured at the ex-Factory level, or the B2B Fleet Buyer level, or the Wholesale level, or the Dealer level, or the actual Consumer (net of any discounting) level.

The NAICS/SIC coding system uses a hierarchical structure where the 5 digit product codes are composed of the sum of the 6 digit codes; the 6 digit product codes are composed of the sum of the 7 digit codes, et al. Thereby the data on the individual product code (at whichever level ? 5, 6, 7, 8 or 10 digit) is complete for that product code:

The Product code [12345] is composed of the sub-codes [123451, 123452, et cetera]; and the

Product code [123451] is then composed of the sub-codes [1234511, 1234512, et cetera].

There are data duplications in the Product Code data and this is due to how the U.S. Department of Commerce / NAICS product coding works. This is not something which DataGroup / Data Institute control as the coding system for this report is based on NAICS codes which we comply with so that our databases are directly compatible with U.S. government and NAFTA databases.

How to interpret the NAICS coded data:

- 5-Digit codes are the Total of the 6-Digit codes
- 6-Digit codes are the Total of all 7-Digit codes
- 7-Digit codes are the Total of all 8-Digit codes
- 8-Digit codes are the Total of all 10-Digit codes

For a full explanation of the NAICS and previous SIC coding system see:

<http://www.census.gov/eos/www/naics/>

Business Buyer Codes

Where the Database Code starts with a 'B' then this refers to Business to Business Buyers. The Business activity being examined is defined by the U.S. Government NAICS codes. The Products and Services being measured refer to the Business to Business purchases of Materials, Products, Services, Energy, Manpower, et al, which are required to sustain that particular economic activity. The economic level measured is either the Purchase Price of the item, or the valuation of that item within the that particular economic activity.

S.I.C. codes

Where the Database Code starts with a 'S' then this refers to one of the U.S. Government S.I.C. Industry definition codes and this data is given at Industry level terms. These are Industries which are measured at Output level.

Colloquial Definitions

Where the Database Code starts with a 'M' or 'W' then this refers to one of the Colloquial definitions of the products and markets.

The NAICS/SIC Coding lacks the granularity of the Colloquial Definitions; thus there are separate series of databases published which use the Colloquial Definitions, as well as a series of databases on the Purchasing of Products & Services by individual business sectors.

Furthermore, in that the raw data uses End User Surveys, Distribution Surveys and Supplier Surveys, the Product Definitions used in the surveys are more colloquial; this is so that the respondents can clearly understand the Products and Markets being covered. Thus there is one or

more separate sets of Product and Market definitions used during the surveys, and these then may be correlated with the NAICS/SIC coding or colloquial definitions as necessary.

Chemical Products

Where the Database Code starts with a 'CAS' or 'EC' then this refers to discrete Chemicals, Substances or Compounds as defined by the U.S. CAS definitions or the European Union EC specifications.

Pharmaceutical Products

Where the Database Code starts with a 'CR' then this refers to discrete Pharmaceutical or Drug products, dosages, or product packaging as defined by the U.S. or European Union regulatory authorities, or by the specifications of individual producers.

The database code for this document is P20372_L

Production / Process data

These Market Consumption databases do not cover Production or Processes. There are separate databases which cover these topics, however this data is not currently available in eBook formats.

ALL MARKET CONSUMPTION DATA FIGURES ARE IN REAL TERMS

REAL TERMS are figures excluding the effects of inflation, thus the Forecasts and figures given can be readily converted into units or volume. This is done by applying the average prices for the base year and dividing the figures by this price for all years. Thus it is possible to easily ascertain both current and forecasted product volume.

A "most recent published accounts" base is used because most company accounts are historic and thus clients will be able to compare the figures given in this report with their own company figures without the need for conversion or the need for inflators or multiplying factors.

AVERAGE SALES PRICES ARE NOT APPROPRIATE OR APPLICABLE TO THIS DATA

The effect of using Real Terms figures is that the forecasted figures will be depressed, as they do not include inflation, and figures from former years (i.e. before the Base Year) will be increased:-

In the diagram below, a Base Year is at the convergent point, and the Current Terms is "o". This Current Cost usually increases because of the effects of inflation. The Real Terms figures, "o", does not include the effects of inflation and thus only increases or decreases if the actual product

volume or units increase or decrease. In this way it is possible to evaluate the market and other figures more realistically.

The figures and the Trend figures represent an overall median probability trend line that is plotted to give the most probable course amongst the annual forecast scatter. Thus, the figures do not reflect year-on-year depressions and peaks in absolute terms, but instead represents a year-on-year modified trend line. The various SCENARIOS provided in the database reflect the differential forecasts specific to the factors being forecast.

The U.S. government uses the term Constant dollars (or 'real' dollars) and this is defined thus: Output values converted to a base price level, calculated by dividing current (or actual) dollars by a deflator. Use of constant dollars eliminates the effects of price changes between the year of measurement and the base year and allows calculation of real changes in output. **HISTORIC AND FORECAST MARKET DATA TRANSITION PERIODS**

This publication provides HISTORIC DATA from 2015 and a MEDIAN FORECAST DATA series covers the years to 2028. There is always a transition period; which is in fact during the last two quarters, i.e. whilst the historic data is being collated. In addition the data given for the next two quarters is considered an estimate rather than a forecast. Thus the 12 month period around the database output date is an estimate. **THE MARKET ENVIRONMENT**

There are four basic issues to investigate when considering the market environment:

1. Market Growth
2. Market Structure
3. Market/s Serviced
4. Customer & End User Factors

1. MARKET GROWTH (both short-term and medium term) is fully analyzed in other sections and further analyzed in these sections. The importance of this factor is of course self-evident and thus not requiring further explanation.

2. THE MARKET STRUCTURE is very critical for profitability. The nature of the market, the location of the Marketplace, the customer base and the supplier structure is fully provided in several other sections of this study and therefore no further discussion is necessary. **THE TOTAL AVAILABLE MARKET**

3. MARKET SERVICED is the term used to denote the function between the product/s and services offered by companies and the particular market sector the marketing effort reaches.

In addition, there is the MARKET AVAILABILITY to consider as this represents the 'real market' available to any particular company or supplier.

Thus the Market Area Serviced is the sector of the market for which companies are offering a

suitable product or service and Available Markets the sector of the market reached by a company's marketing effort. The areas marked as the overlap in the Market Area Served, i.e. the market sector for which companies are offering suitable product/s or services and which may theoretically be reached by company marketing activities, but of which part is controlled by either other Purchasers or Suppliers. The Market Availability is the total market perceived by the total Purchaser universe; however the Available Markets the market which is actually available to individual Suppliers.

The Market Area Served is the true market for companies in terms of product/s and services, however parts of this market may be difficult or impossible to attain due to the control exerted by either the controlling Purchasers or Suppliers.

HISTORIC DATA AND TIME SERIES

The recent HISTORIC DATA in this section covers the years from 2015. This standard HISTORIC format (which essentially contains recent data) is the most popular time series demanded by readers. Many readers feel that it is more important to know what is likely to happen in the recent past rather than what has transpired in the long-term past.

FORECAST DATA AND TIME SERIES : MEDIAN MARKET FORECAST

The MEDIAN MARKET FORECAST DATA in this section covers the years to 2028. This standard FORECAST format (which essentially contains future projections) is the most popular format demanded by readers. Many readers feel that it is more important to know what is likely to happen in the recent future rather than what may transpire in the far distant future. We can of course provide readers with other outputs of long-range forecast data and this is done as part of our Service.

CORPORATE DATABASE: These figures only refer to the Markets accessible to Industry Companies and may not reflect the overall or total markets for the products or market sectors.

1. ALL FIGURES IN THIS SECTION ARE IN REAL TERMS:

REAL TERMS are prices excluding the effects of inflation, thus the Market Consumption figure given can be readily converted into units or volume. This is done by applying the average sales prices for the base year and dividing the Market Consumption figures by this price for all years. Thus it is possible to easily ascertain previous and forecasted product volume.

A base is used because most company accounts are historic and thus readers will be able to compare the figures given in this volume with their own figures without the need for conversion or the need for inflators or multiplying factors.

The effect of using Real Terms figures is that the forecasted figures will be depressed, as they do not include inflation, and figures from former years will be increased.

2. The Market Consumption figures and the Trend figures represent an overall median probability trend line which is plotted to give the most probable course amongst the annual market forecast scatter. Thus the figures do not reflect year-on-year depressions and peaks in absolute terms, but instead represents a year-on-year modified trend line.

3. All analyses are based on correlations of the results of the Surveys of Suppliers, Distribution and Customers. Thus, for example, an analysis of Market Sectors will gain data firstly from the End User Surveys and secondly confirmations and correlations will be gained from the Surveys of

Suppliers / Distributors. This in the opinion of the publishers is a very accurate method and is far superior than, for example, that which is used in the compilation of the majority of published governmental statistics.

4. All figures given in this volume refer only to the product/s covered and not to any other product or systems which may be connected or associated with the products covered.

5. The TREND figures given in the Industry section of this volume refers to the average year-on-year change in the period to 2028.

6. The YEAR-ON-YEAR TREND figures given in this volume refer to the average year-on-year change in the period to 2028. *

The Frozen Vegetables Poland eBook provides 14 years Historic and Forecast data on the market for each of the 19 Products and Markets covered. The Products and Markets covered (Frozen Vegetables) are classified by the Major Products and then further defined and analysed by each subsidiary Product or Market Sector. In addition full Financial Data (188 items: Historic and Forecast Balance Sheet, Financial Margins and Ratios) Data is provided, as well as Industry Data (59 items) for Poland.

FROZEN VEGETABLES

1. Frozen Vegetables
2. Frozen vegetables: Asparagus
3. Frozen vegetables: Green beans, regular and french cut
4. Frozen vegetables: Lima beans, baby emerald and fordhook
5. Frozen vegetables: Broccoli
6. Frozen vegetables: Brussel Sprouts
7. Frozen vegetables: Carrots
8. Frozen vegetables: Cauliflower
9. Frozen vegetables: Green peas
10. Frozen vegetables: Spinach
11. Frozen vegetables: Succotash
12. Frozen vegetables: Peas and carrots
13. Frozen vegetables: Other combinations (mixed veg, peas and onions etc.)
14. Frozen vegetables: French fried potatoes
15. Frozen vegetables: Other potato products (patties, puffs, etc)
16. Frozen vegetables: Sweet cut corn, yellow
17. Frozen vegetables: Sweet cob corn, yellow
18. Frozen vegetables: Southern greens (collards, kale, mustard and turnip)
19. Frozen vegetables: Other frozen vegetables

There are 188 Financial items covered, including:
