Preface Why I've written this book The purpose of this book is to provide a simple, brief, concise and relevant reference for those who are new to the sport of Sporting Clay shooting. I started shooting fairly recently and fortunately got off on the right foot by being introduced to two excellent coaches. This was serendipitous rather than planned and there are plenty who aren't so fortunate. In the time that I have been shooting I have been very disappointed to see shooters young and old making their shooting harder and less enjoyable than necessary by not appreciating the basics. This book is intended to remedy that by providing a clear and comprehensible grounding in the basic principles, their purpose and to also describe the environment within which the shooting itself occurs. Getting the basics right makes a challenging sport easier, safer and more enjoyable

I can't emphasise enough the importance of starting off on the right foot. Bad habits are easy to get into and hard to break **Intended audience** This book is for anyone of any age or gender who is thinking of taking up Sporting Clay shooting. I found that there was a great deal to take in to feel comfortable and relaxed (well as relaxed as possible) at a shoot, that is not only how to hold and shoot a gun with a reasonable chance of hitting the target but also to know what to expect, what to do and how to behave at a shooting ground. Not only is this book intended to describe the basics of a good shooting technique, it also describes the equipment and environment within which shooting is conducted. **Scope** This book covers the following topics, ordered such that each section builds upon the ideas and or terms used in preceding sections: What Sporting Clay shooting is (compared with Trap, Skeet, Game or other shooting disciplines) Guns and Equipment (so that in further sections the 'tools' have been introduced) Storage, handling and safety (now that we know what we're talking about, we can consider how to be as safe as possible) The basics of hitting a target (how doing the right things can make the job easier) Putting theory into practice – what to expect at a shooting ground (etiquette, behaviour and protocol) What to do

next – with this basic comprehension and having adopted good practice, how to proceed.

There are too many books, blogs and videos for me to list. I would recommend an internet search or a trip to a good bookshop to find something that suits you Please note that this publication is not intended to be an exhaustive guide for all aspects of the sport. The text contains pointers to other relevant books and publications that will cover specific areas in more expert detail. Introduction

What is Sporting Clay Shooting? Sporting Clay shooting is designed to in some regards emulate the flight or trajectories of typical game (pheasants, rabbits etc.) It also extends on this by producing targets with paths that are very much man made. All are designed to test the shooter and their hand to eye coordination. Shoots are sited in the countryside and take advantage of all types of terrain, from fields to valleys and hillsides. Targets may appear overhead from behind or in front, may move from left to right at various speeds, altitudes, angles and distances. Targets may 'loop' or arc vertically, appear through foliage and trees, skim across the ground or soar away. The only limits on trajectory are those prescribed by the properties of a shotgun, the terrain over which the shoot is conducted and the trap that launches the target. To further challenge the shooter, clays of different sizes may be used (standard, midi and mini), different colours (standard black to orange, white or luminous green) and profiles (rabbit and battue in addition to the aforementioned standard and its derivatives). Target is used interchangeably with 'bird' reflecting the origins of the sport however no live creatures are shot at in Sporting Clay shooting. By contrast, Skeet shooting uses only two traps that throw or release a target each on the same, repeatable trajectory. The shooter moves between 7 stands arranged in a semi-circle. See http://www.claypal.co.uk/guide_to_english_skeet.php for a brief description. Trap disciplines, of which there are several, are variations on a theme and involve shooting at targets / birds that are generally travelling away from the shooter, much as game birds might rise before a line of beaters. The number of stands / stations, the number of traps, the speed of the birds, the delay between calling for the bird(s) and it / them appearing all add subtle complication, depending upon the type of trap shooting. See [this CPSA information](#) for full details. All disciplines require technical and mental skill if high scores are to be achieved and maintained. The challenges are many and varied. Having a good working appreciation of the basics of shooting will make hitting these targets easier (but not necessarily easy) and more rewarding. It will also make the process safer and more enjoyable for the other participants.

Like any sport or pursuit, experts make it look easy. What isn't visible are the years of experience and hours of practise. This book might give you a head start The sport is governed in the UK by the Clay Pigeon Shooting Association (CPSA). Their web site (www.cpsa.co.uk) contains a wealth of useful information. The CPSA set the rules for the sport and also maintain the rankings of CPSA members. The Gun Gun Types and Components Before proceeding further it is best to introduce the types of gun used in clay pigeon shooting and also the names of the component parts. Familiarisation with the naming convention of guns and their components will aid comprehension of the following sections and chapters. It also enables accurate conversation with others. There is a legal definition of a shotgun which controls the number of cartridges in any magazine, its length and that the internal bore of the barrel(s) must be smooth. [This](#) useful government paper contains more information which also describes aspects of the licensing procedure with more information below.

There are three main types of gun: Side-by-side (SbS) Over-and-under (O/U)
Semi-automatic
