

KINZE RETROFIT KITS

UPDATE YOUR PLANTER TO THE LATEST TECHNOLOGIES

Increase yields, boost profits, and increase the value of your planter¹. Kinze planter retrofit kits improve seed depth control and spacing, enable variable rate planting, reduce seed waste, and improve planting performance.

KINZE TRUE RATE™ VACUUM METER

Improve singulation and seed placement. Replace your existing finger, brush, or EdgeVac meters with the Kinze True Rate™ vacuum meter to experience 99+% planting accuracy at planting speeds up to 8 mph².

Available for: 3110, 3140, 3200, 3500, 3600, & 3700

PNEUMATIC DOWN PRESSURE

Provide proper seed depth for consistent emergence. The Kinze pneumatic down pressure system adjusts to maintain consistent down pressure in changing soil types to ensure consistent seed depth.

Available for: 3500, 3600, 3660, 3700, & 4900

ELECTRIC CLUTCHES

Diminish overplanting and reduce seed costs. Kinze electric clutches eliminate overplanting at end rows, point rows, and in irregularly shaped fields by turning off seed meters based on field maps and previously planted areas.

Available for: 3200, 3600, & 3700

EVEN ROW PUSH UNIT

Reduce tractor tire damage when planting 15-inch no-till beans. Avoid running tractor tires on corn stubble by adding an even row push unit. Also improves seed placement accuracy and utilizes the full width of the planter.

Available for: 3500, 3600, & 3660

HYDRAULIC DRIVE

Optimize seed performance by planting at variable rates. Adding a variable hydraulic drive enables adjustment of planting rates on the go from the tractor cab using field prescription maps or manual control.

Available for: 3600

DAWN® GFX HYDRAULIC ROW CLEANER

Ensure consistent seed depth by clearing heavy crop residue. Toolbar-mounted row cleaners are hydraulically adjustable from the cab and provide an undisturbed and consistent row unit ride.

Available on rear row units for: 3600, 3660, & 4900

HYDRAULIC WEIGHT TRANSFER

Reduce yield loss from pinch row compaction. The Kinze hydraulic weight transfer system distributes the planter's weight across the toolbar to reduce pinch row compaction and maintain consistent planting depth across all rows.

Available for: 3600

FURROW CRUISER® SPIKED CLOSING WHEEL

Improve root penetration by reducing sidewall compaction. The angular tooth design of this closing wheel provides an ideal seed trench that promotes consistent plant emergence—especially in tough no-till conditions and saturated soils.

Available for: 3000, 3110, 3140, 3200, 3500, 3600, 3700, & 4900

Are you ready to increase productivity, yields, and profits? Contact your local Kinze dealer for more information, or visit Kinze.com/Owners/Retrofit-kits

¹Contact your local Kinze dealer for information on specific planter availability. Not all retrofit kits are available on all planter configurations.

²Speed and accuracy of the planter may be limited by field conditions, seed type and other variables.
