

VACUUM EXCAVATOR ACCESSORIES AND TOOLS

ONE MAN 5' (1.5 M) 4 NOZZLE STANDARD REDUCTION TOOL (8043115). Patented tool allows simultaneous reduction and removal of soil for one man potholing. Four nozzles — two cutting peripheral clearance and two crossing to dislodge the core — provide maximum penetration in most soils.

LAWN SWEEPER (8043935). Used on grass to remove drill fluid (Bentonite and/or polymer) that has seeped to the surface during the drilling operation. The smooth configuration of the pick-up head reduces damage to grass.

PAVEMENT SWEEPER (8043896). Cleans wet or dry spoil off concrete or asphalt surfaces following a digging or vacuuming operation. Two high-pressure water jettors dislodge dirt, while the vacuum stream removes the debris to the collection tank.

PAVEMENT CLEANER (8043480). Water-powered rotary heads wash surfaces while the vacuum sucks up the water after the surface has been pressure-washed for easy clean up.

ALUMINUM CYCLONE BUCKET (8042982). Removes dry material in high-production dry applications such as micro trenching or in-plant clean ups.

VALVE BOX CLEAN OUT TOOL (8043384). The 2-inch (5 cm) hose removes debris from valve box prior to exercising the valve head or shutting down the line in case of an emergency.
