## Bios update tools

Occasionally, a computer will need to have its bios updated. This is especially true in older cars. As new devices and standards rise, the BYOS needs to change in order to understand the new hardware. Since the BIOS is stored in some ROM form, changing it is a bit harder than upgrading most other types of software. To change the BIOS itself, you'll probably need a special program in the computer or manufacturing BIOS. Look at the BIOS review and date information displayed on system startup or check with your computer's manufacturer to find out what type of BIOS you have. Then go to the BIOS Manufacturing website to see if an upgrade is available. Download the upgrade and the utility program needs to install it. Sometimes the utility and update are combined into a single download file. Copy the program, along with the BYOS update, on a floppy disk. Restart your computer with the floppy disk in the drive, and the BIOS handling programs the old ones and write the new one. You can find a BIOS Wizard that will check your memoir in Ameas BYOS. Major BIOS manufacturers include: American Megatrends Inc. (AMI) Technology PhoenixAWinbond As with changes to the CMOS installation, be careful when improving your BYOS. Make sure that you are upgrading to a version that is compatible with your computer system. Otherwise, you might corrupt the BIOS, which means you won't be able to boot your computer. If in doubt, check with your computer's manufacturer to be sure you need to upgrade. For more information about BYOS and related topics, check out the links below. Related to HowStuffWorks article by TS Jordan ACPI stands for advanced configuration and power cataser options in your system's biology. The options allow you to change the power settings for your computer at the lowest possible level. Update your ACPI settings in the BYOS by first accessing the BIOS during the startup process of your computer, allowing you to select the new ACPI setting you want. Press the indicate key in the startup messages to enter BYOS (e.g. F2 for Mother Intel). Highlight the power menu and press Enter. Highlight the ACPI option and press Enter. Select the ACPI value you want. Press F10 to save and exit. By Stephen Lilley If you want to update the settings on a core computer/production computer system, or BIOS, from a remote location, you can do so using a native window called Remote Desktop Connectivity. This utility allows you to connect to a remote computer and control it using your own machine. You can then reboot that remote computer, load the BIOS and make any configuration changes you would like without actually being anywhere near the machine in question. Click Remote Desktop Connections. Type the computer name you want to remotely adjust in the Name box and click Connect. You'll now see the desktop in to admit to connecting on computer controller. Click Start and restart your connected computer reboot. Press Admit to connect your computer's bios access key. This is the key listed on screen under the logo of your computer's manufacturer. This will boot adults connecting the computer to its biOS utility. You can now update any settings related to BIOS you would like using your computer's keyboard. By Laurie Sorrels upgrading the BYOS allows you to accommodate new processors, overclocking options and new features that the old BIOS may not be able to do. Under normal circumstances, it is not a good idea to enter the BYOS unless you are proficient in computer technology. The BIOS maintains all hardware configurations for the boot-up process, and an incomplete user has the potential to block itself from the BIOS via the password feature. Take great care when entering the BYOS. Press the F1 key when the first screen appears to access the BYOS. This screen is the initial black screen displayed, not the broken windows screen. If you see the Windows logo, then you missed the opportunity to get to BYOS - back in Step 1. Write the BIOS version listed on the main screen of the BYOS. Exit the BIOS. Press the F10 key, select Yes and then press the Enter key. The computer will restart and boot up normally. Click the Compliance Driver Downloads link at the bottom of the page in the Resources section. Type the template in your computer in the Include your product number field, and click the Next button. Select the operating system that is installed on your computer. Get the latest BIOS availability for your computer. The latest BIOS can be found under three different titles: BYOS, BYOS- System or RomPaq. Click the appropriate link and download the BYOS update on your computer. Copy the downloaded file onto an empty floppy format disk. Leave the disk to the drive and restart the computer. When the computer is restarted, it will open Download Page in the floppy drive. Download the page will have different instructions, depending on the BYOS version and your computer type model. After Download the Page, the Screen Setup screen will appear. Follow the instructions carefully and completely. Your BYOS update has now been installed. Many of your applications alert you when an update is available - but what about those apps that don't, or the ones you just don't run all the time? This week we want to get the best available software update tools. Update: For five most popular tools, check out the Sync Best Update Tools; Then take a look at the most popular tools for the work in that batch. Rather than wait around for your software to advise you to updates (let's face it, a lot of... Read more Five this week, we want you to tell us all to have to know about the tools you use to make sure you is up and running with the latest updates for all your important (and not so important) software. Hive Five nomination takes place in the comments, where you post your favorite tools for the job. We get hundreds of comments, so make your nomination clear, please include it at the top of your comments like so: VOTE: Software Update Tools. Please do not include your vote in a reply to another comment. Instead, do your vote and reply to separate comments. If you do not follow this format, we may not count your votes. To prevent temperatures and results, voting from first time comment cannot be counted. After you've nominated you, let us know what makes it stand out from the competition.G/O Media can get a CommissionAbout Five in Hive: Hive Sync feature is asked to answer the most frequently found questions: Which tool is the best? Once a week we'll put out a call for contenders looking for the best solution to a certain problem, then you tell us your favorite tools to get the job done. Every weekend, we'll report back with the top five recommendations and give you a chance to vote on who is the best. For an example, check out Hive last week's Five Best Windows Task Scheduler alternatives. The Windows Task Manager is a functional but basic tool for keeping an eye on what your computer... Read more rather than wait around for your software to notify you of updates (let's face it, a lot of applications never will), these five handy tools keep an eye on your apps, alert you when an update is available, and streamline the upgrade process. Photos by Wesley Fryer.Earlier this week we have asked you to share your favorite software update tools, and now we're back with our five famous mates. Read on for an EVISION view of each, then cast your vote for the one you like the best of the below votes. Note: Click the below screenshots will expand the screenshots of the original sizes. FileHippo Update Checker (Windows, Free) G/O Media can get a FileHippo.com commission is a software download site that hosts the tone of both freeware and sharing, so the FileHippo Update Checker is a natural extension of their website-only best. The lightweight application (the download is 155kb) scans your computer for installing apps in seconds, compares your installed version with the FileHippo.com database to check for new releases, then list all detected updates in a list of your browser along with links to download your updates. FileHippo Update Checker is a free download for Windows only. (Original Post) Windows only: Software download Website File Hippo has released a handy piece of software called... Read moreSnaptic / APT (Linux, free) tool in advanced packaging, a.k.a. APT, is a free build tool of most Linux distributions and many variants that handle the installation, removal, and upgrade of software packages. APT is a who attended a way towards making Linux a bit friendly to the masses that aren't comfortable to install or compile software packages on Linux, but it runs from the command line, so it's still not all that friendly to join Linux in the Windows or Mac world. That's where Synaptic comes in. Synaptic is a graphical front end of APT that makes the wild tool much more user-friendly, and - yes - it handles check for and upgrade software and software upgrade and aplomb. (Folks using Ubuntu, Linux's most popular distribution among Lifehacker readers, take note: Synaptic is replaced by the Ubuntu Software Center - another APT update tool - in April of 2010.) There are dozens and dozens of distributions handled all manner of large and niche markets... Read moreAppFresh (Mac OS X, Free) AppFresh is an automatic update check for Mac OS X. The computer analysis tool for installing software and checks for new database account version of my website use this. Aside from also encompassing the fontation of built-in Software Update Software (if you install this, you won't need to run that), filters your latest app and installs applications in a number of useful ways, and it provides description of each tool in a handy info panel along with release notes. Perhaps most impressively, AppFresh can automate the update process for many of the apps so you don't have to go through the tedious process of downloading and installing every single update by hand. AppFresh is free (though currently in a Development Preview, which might mean it will eventually cost money), Mac OS X only. Update Notifier (Windows, Free) Update Notifier is a small, portable update utility that quickly scans your installed applications and lists your available updates in a small window, complete with links to sites where you can download updates. The application includes options to filter all your installed applications, updates only, major updates (2.03.0), minor updates (2.0 to 2.1), and build updates (2.0.0 to 2.0.0). If you sign up for an account from the website CleanSofts.org (the companion site of the application), you can also set up a list view and leave the email your site whenever updates on apps on your watch list are available. Update Notifier is pointless, Windows only. It's also portable, which might come in handy next time you're heading to your after-hours work work as your person's IT. (Original post) Windows only: Update Notifier is not a new type of software, but it is a rather straight-ahead and Read moreSecunia PSI (Windows, Free) Secunia Personalia Inspector software takes a bit more of a doomsday —i.e. , security-focused-approach and software update. When you run your first scan after installing Secunia, you will be presented with a list of insecurity apps available, end-of-life apps that are no longer supported by developer, and patch apps that have the security updates. It's not most user-friendly in the batch, but is headrn to loading with information and tools to ensure that your installed software is running updates and older security updates. Secunia PSI is pointless, works with Windows. (Original Post) Windows only: Freeware Application Secunia Inspects Personal Software is sort of like Windows... Read more Now that you've peused their favorites, it's time to discard your newsletter for the software update tool you like best: Surprised you didn't do the list, or just want to share what makes your software update tools of choice so great? Let's hear it in the comments. Comment.
