

Setting up your domain for your Lawgical Web Site on GoDaddy

In order for Lawgical Sites to work properly on your domain, there are two things that needs to be set up:

- a. you need to setup three A record needs that point to:
 - 75.101.163.44
 - 75.101.145.87
 - 174.129.212.2
- b. your www CNAME needs to point to @

Below are the instructions to update this yourself at GoDaddy.com (www.godaddy.com), or you can call their tech support line at (480) 505-8877 and give them the above information.

Please note, before you begin this process you will need to enter the domain you want to use for your Lawgical Site inside the Lawgical.com Admin.

Step 1

Log in to your GoDaddy account and go to: "My Account"

Step 2

Click on the (Advanced Details) link to the right of the domain you wish to use for your web site. This will take you to the "Domain Manager".

Domain Name	Expires
DNBAILBOND.INFO	1/3/2011
DNBAILBONDS.INFO	1/3/2011
DNBAILBONDS.BIZ	1/5/2011
3BLOGS.COM	1/11/2011

Step 3

Once in the Domain Manager, find the "DNS Manager" section and click the "Launch" link. This will take you to the "Zone File Editor"

Step 4

Inside the Zone File Editor you'll need to do two things

- a) Edit your A (Host) entry so that @ points to **64.92.219.179**
After making this edit, you'll need to click the "Save Zone File" button

The screenshot shows the Zone File Editor interface. At the top right, there are two buttons: "Cancel" and "Save Zone File", both highlighted with a red box. Below the header, there are several action buttons: "Delete", "Bulk Actions", "Import/Export", "More", and "Add New Record". The main content area is titled "A (Host) What is this?". Below this title is a table with the following columns: "Host", "Points to", and "TTL". The first row in the table is highlighted with a red box and contains the following data: Host: "@", Points to: "64.92.219.179", and TTL: "1 Hour". There is also an "Undo" button with a red 'x' icon next to the TTL value.

- b) Then, you'll need to make sure that your CNAME (the section below) shows that www points to @

Please click the "Save Zone File" button again.

The screenshot shows the CNAME (Alias) section of the Zone File Editor. The title is "CNAME (Alias) What is this?" and there is a "Restore Defaults" link on the right. Below the title is a table with the following columns: "Host", "Points to", and "TTL". The table contains several rows, each representing a different alias. The last row in the table is highlighted with a red box and contains the following data: Host: "www", Points to: "@", and TTL: "1 Hour".

Host	Points to	TTL
<input type="checkbox"/> e	email.secureserver.net	1 Hour
<input type="checkbox"/> email	email.secureserver.net	1 Hour
<input type="checkbox"/> ftp	@	1 Hour
<input type="checkbox"/> imap	imap.secureserver.net	1 Hour
<input type="checkbox"/> mail	pop.secureserver.net	1 Hour
<input type="checkbox"/> mobilemail	mobilemail-v01.prod.mesa1.secureserver.net	1 Hour
<input type="checkbox"/> pda	mobilemail-v01.prod.mesa1.secureserver.net	1 Hour
<input type="checkbox"/> pop	pop.secureserver.net	1 Hour
<input type="checkbox"/> smtp	smtp.secureserver.net	1 Hour
<input type="checkbox"/> webmail	webmail.secureserver.net	1 Hour
<input type="checkbox"/> www	@	1 Hour

You're done.

These changes can take up to 24 hours to take effect before your web site shows on your domain, usually happens much sooner.
