

# A more youthful appearance can be yours now !

Fractional means that only a fraction of the skin surface is exposed to the laser beam, leaving untreated skin around each treated micro spot. This promotes fast natural healing and a short recovery time. The beneficial effects of the laser beam expands under the skin surface to stimulate new collagen production across the entire area. The innovative technology of the Mixto SX minimizes discomfort during treatment, so that for most patients a mild topical anesthetic is only necessary.

## Planning for your MiXto SX Laser Treatment

**Prior to Treatment** – Your doctor will discuss which areas of your skin will benefit from Micro Fractional CO2 Laser treatments as well as the results you can expect. In most cases, Micro Fractional laser treatment can be safely performed on the face, neck, chest and hands. Usually, a single treatment produces satisfying results. If desired, a second treatment can be scheduled 8 weeks after the first.

**The Treatment** - The *MiXto SX* treatment is done in the comfort of your doctor's office. The areas to be treated are thoroughly washed and the skin is dried prior to treatment. Although most patients only require a mild topical anesthetic, your doctor will determine what is best for you and your treatment. During treatment you will feel a warm sensation on the skin. This is to be expected. Treatment time for a full face is approximately 25 minutes.

**Post Treatment** - You will have a slight burning sensation similar to sunburn, which lasts anywhere from 30 minutes to 3 hours. Your skin will show a fine pinpoint like pattern as a result of therapeutic beams.

### Day 1-2

The fine pinpoint pattern will begin to disappear and the skin will have a tanned look. At this stage, makeup can be applied. Most patients return to their normal daily routine.

### Day 3-4

The top layer of skin will begin to peel during normal washing, revealing new rejuvenated skin with improved color and texture.

### Day 5-6

The peel will be complete in most cases. Avoid prolonged sun exposure for at least 3 months. Apply a moisturizing SPF 30 sun block every day.

You will see continued reduction of fine lines and wrinkles over the next 6 months as new collagen is produced.

## Patient Testimonials

I have always taken good care of my skin but at 48 years of age I started to notice brown spots on my cheeks and puffiness under my eyes. My doctor recommended the *MiXto* treatment. On the first visit, my photo was taken without makeup showing the reality of how bad my skin really looked. I immediately scheduled my treatment. The treatment lasted about 30 minutes and was easier than I had imagined. Within 4 days my skin had peeled - looking fresh and slightly pink. My skin looks fantastic and best of all my lower eyelids are not puffy anymore!  
- Kay

Six months after having the *MiXto* laser treatment, I was asked by my family physician what happened to my skin? Every year, I would have pre-cancerous spots removed from my face but not this time. This amazing treatment has motivated me to take care of my skin. I now always apply sunscreen when outdoors.  
- Paul

My expectations for the *MiXto* laser treatment were very simple. I wanted to have years of sun damage and fine lines removed from my face. I not only had my expectations met, but I found that my skin was smoother and tighter.  
- Kim

The treatment of choice for acne scars or signs of aging like fine lines, wrinkles, skin laxity and uneven pigmentation is **Micro Fractional CO2 Laser Skin Rejuvenation.**

The *MiXto SX* Micro Fractional CO2 Laser is a revolutionary new treatment for Skin Rejuvenation that makes it possible for you to have healthy, younger looking skin with minimal post treatment down time. A single treatment can show significant improvement in skin texture and color while softening wrinkles.

### How Micro Fractional CO2 Laser Treatment Works

The *MiXto SX* delivers a therapeutic matrix of tiny beams of light energy (each about the size of a hair) to the top and mid layers of the skin with minimal discomfort. This results in.....

- Immediate shrinkage of damaged skin
- Softening of fine lines and wrinkles
- Removal of age and sun spots
- New collagen production\* for up to 6 months following treatment
