This Chemical Vapor Deposition (CVD) laboratory grown diamond is

The Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded, an LaserScribed® by International Gemological Institute (IGI). A LGD has essentially the same chemical, physic

and optical properties as a mined diamond, with the exception of being man-made (a manufacture

product) LGD's are hysically produced by CVD (chemical vapor deparation) or by HRHT (high pressure high temperature) growth processes and may include partigrowth modifications to change the color. (If utilities the most advanced techniques and equipment currently available including, binocular incressorpes, diamond color marters, non-contact-optical measuring devices, as wide range of analytical techniques including FIIR UV-VENIR, romen spectroscopy, and fluorescence analysis at various sectionfon wavelengths.

This Report includes advanced security features. This Report is neither a guarantee, valuation nor appraisa and by making this report IGI does not agree to purchase or replace the article.
