laboratory grown diamond is classified

line Laboration's enough brainfair (Leb) described in this kepon has been arabyzed, graded, an LaberCaribed® by International Gemological Institute (IGN). A LGD has essentially the same chemical, physici and optical properties as a mined diamond, with the exception of being man-made (a manufacture and optical properties as a mined diamond, with the exception of being man-mode (a manufactured product). (GPO are typically produced by CPO (behenical vegor deposition or by HPHT (high pressure high temperature) growth processes and may include post-growth modifications to change the color. (GI utilizes the most advanced stechniques and equipment currently available including, bifaculting microscopes, and advanced stechniques and equipment of the color of the color of analytical fechniques including FIRs. (WV-SFIRR, more spectroscope), and fluorescence analysis of various excitation wavelengths. The Report includes advanced security features. This Report is netter a guarantee, voluction not approach and by making this report is close not agree to purchase or replace the analysis.

The Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded, and

This Chemical Vapor Deposition (CVD) laboratory grown diamond is

classified as Type IIa
