Comments: This Chemical Vapor Deposition

classified as Type IIa

(CVD) laboratory grown diamond is

The Laboratory Grown Diamond (LGD) described in this Report has been analyzed, araded, an LaserScribed® by International Gemological Institute (GD), A LGD has essentially the same chemical, physicand optical properties as a mined diamond, with the exception of being man-made (a manufacture product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post-growth modifications to change the color. IGI utilizes perspectually grown processes and may include post-growth modifications to change the color. [6] utilizes the most advanced techniques and equipment currently available including, binacular microscopes, advanced color matters, non-contact-optical measuring devices, a wide range of analytical fechniques including FIIR. (IV-VS-RIIR, ramon spectroscopy, and fluorescence analysis of various excitation wavelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation nor apprinted and by making this report light does not agree to purchase or replaced the article.
