laboratory grown diamond is classified

This Chemical Vapor Deposition

(CVD) laboratory grown diamond is classified as Type IIa

The Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded, and LaseScribed3 by Inferentianal Gernological Institute (GG). A LGD has essentially the same chemical, physica and optical properties as a mitted diamond, with the exception of being mam-mode (a manufactures). and opinious propries as a finited adminious wife respective to being instantious of instantious developments of products. LGO's are typically produced by CVD (chemical voyor deposition) or by HPHT (high pressure high temperature) growth processes and may include post-growth modifications to change the color. IGL utilizes the most advanced techniques and equipment currently ovaliable including, binacular microscopes, diamond color masters, non-contact-optical measuring devices, a wide range of analytical techniques

including FTIR, UV-VIS-NIR, raman spectroscopy, and fluorescence analysis at various excitation wavelength This Report includes advanced security features. This Report is neither a guarantee, valuation nor approise and by making this report IGI does not agree to purchase or replace the article.
