This Chemical Vapor Deposition (CVD) laboratory grown diamond is classified as Type IIa

The Exboratory Grown Diamond (LGD) described in this Report has been analyzed, graded, and usersCarber8 by International Gernological Institute (KGD). A CoD has essentially the same chemical physical products (LGD) and the same chemical physical products (LGD) are physically produced by CVD (chemical vegor deposition) by IHPM (high pressure high temperature) growth processes and may include post-growth modifications to change the color. Isd utilizes the most advanced techniques and exprenent currently available including, binacular microscopes diamond color matters, non-contact-polical measuring devices, a wide range of analytical techniques including FIIIs (UV-ISFNR, roman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes CRIA in the production of the production of by middle production of by middle production and by middle pits report licit case not agree to purchase or replace the article.

This Chemical Vapor Deposition

(CVD) laboratory grown diamond is classified as Type IIa
