This Chemical Vapor Deposition (CVD) laboratory grown diamond is classified

The Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded, and LaseScribed9 by inflementational Gernological Institute (IGI). A LGD has essentially the same chemical, physical and optical properties as a mixed admand, with the sexception of being man-mode (a manufactured product), LGDs are hypocally produced by CVD (chemical vapor deposition) or by HRFII (high pressure high temperature) growth processes and may include post-growth modifications to change the color. ISI utilizes the most advanced techniques and equipment currently available including, binocular microscopes diamond color masters, non-contact-optical measuring devices, a wide range of analytical techniques inclusting FIIR. UV-VIS-NIIR, raman spectroscopy, and fluorescence analysis at various excitation vavelengths this Report includes advanced security features. This Report is neither a guarantee, valuation nor approximant of ymaking this report IGI does not agree to punchase or replace the article.

This Chemical Vapor Deposition (CVD) laboratory grown diamond is

classified as Type IIa
