laboratory grown diamond is classified

This Chemical Vapor Deposition

(CVD) laboratory grown diamond is classified as Type IIa

he Laboratory Grown Diamond (LGD) described in this Report has been analyzed, araded, an the Eubolatory Grown Dathland (GB) described in this keptir has been analyzed, gadea, an LaseScribed® by International Gemological Institute (GB). A LGD has essentially the same chemical, physic and optical properties as a mined diamond, with the exception of being man-made (a manufacture

and opinious propries as a finited administry, with the exception to being instantiable of anniable reproduced by CVD (chemical voyor deposition) or by HPHT (high pressure high temperature) growth processes and may include post-growth modifications to change the color. (SI utilizes the most advanced techniques and equipment currently available including, binacular microscopes admand color masters, non-contact-optical measuring devices, a wide range of analytical techniques

including FTIR, UV-VIS-NIR, raman spectroscopy, and fluorescence analysis at various excitation wavelength This Report includes advanced security features. This Report is neither a guarantee, valuation nor approise and by making this report IGI does not agree to purchase or replace the article.
