IGI LABORATORY GROWN DIAMOND ID REPORT

IGI Report Number

For Terms & Conditions, please visit www.igi.org

This Chemical Vapor Deposition (CVD) laboratory grown diamond is classified as Type IIa

The Laboratory Grown Diamond (LGD) described in this Report has been analysed, graded, and LassSchedtil by International Gemological Institute (GR). A LGD has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product), LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth, processes and may include padgrowth modifications to change the color. (GI utilises the ment advanced techniques and equipment currently available including, binocular microscopes, including FIIR, UV-VIS-NR, ramon spectroscopy, and fluorescence analysis at vatious excitation wavelengths. This Report Includes advanced security features. This Report is nettier a guarantee, valuation no approad and by making this report (GI does not agree to purchase or replace the anticis. © INTERNATIONAL GEMOLOGICAL INSTITUTE, INC.
