This Chemical Vapor Deposition (CVD) laboratory grown diamond is classified as Type IIa

The Laboratory Grown Diamond (LGD) described in this Report has been analysed, graded, and LaseScribed® by International Germological Institute (GR). A LGD has issentially the same chemical physical and optical properties as a mixed adamond, with the exception of being mam-made (a manufactured product). LGD's are hypically produced by CVD (chemical vapor deposition) or by HRHI (high pressure high temperature) growth processes and may include post-growth modifications to change the color. IGI utilizes the most advanced techniques and equipment currently available including, binacular microscopes, admond color consistes, non-contact-optical measuring devices, a wide range of analytical techniques including FIIR, UV-VIS-NIR, raman spectroscopy, and fluorescence analysis of various excitation wavelengths. This Report includes advanced security features. This Report includes advanced security features.
