This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed's by International Gemological Institute (IGD). A IGD has assertiately the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post growth modifications to change the color. Git diffuses the most advanced techniques and equipment currently available including, binocular microscopes, diamond color masters, non-contact-optical measuring device, wide range analytical techniques including Film, IUAVISNIR, raman spectroscopy, and fluorescence wide range analytical techniques including Film, IUAVISNIR, raman spectroscopy, and fluorescence and provided the properties of the properties
