This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Lasercibed® by international Gemological Institute (G). A LGD has essentially the chemical physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPH (high pressure high temperature) growth processes and may include post growth modifications to change the color. IGI utilizes the most advanced techniques and equipment currently available including, binous excitation wavelengths: This Report Includes advanced evolution the section of the analysis of various excitation wavelengths: This Report Includes advanced evolutify features in this Report is neither a guarantee, valuation nor appraisal and by making the report IGI does not agree to purchase or replace the online.
