This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed's by International Gemological Institute (Gi). A LGD has sesentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHI (high pressure high temperature) growth processes and may include post growth modifications to change the color. Bid tittless the most advanced techniques and equipment currently available including, binocular microscopes, almonad color masters, non-contact-optical measuring device, and temperature or contact production of the color of the c
