Inis Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscibed's by International Gemological Institute (GS). A LGD has assentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post growth modifications to change the color. IGI utilizes the most advanced techniques and equipment currently available including, binocular microscopes, diamond color masters, non-contact-optical measuring device, a wide range analytical techniques including IRII, UV-VIS-NIE, iraman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced security features. This Report is neither a quarantee, valuation nor approach and by making the report IGI does not agree.
