Comments: This Laboratory Grown Diamond was created by Chemical Vapor Deposition (CVD) growth process and may include post-growth treatment Type IIa

Diagram illustrating the proportions of a diamond-shaped gemstone. The proportions are defined by the following measurements:

- Thick**: The vertical height of the diamond.
- Long**: The horizontal width of the diamond.
- 62%**: The ratio of the width of the top facet to the total width.
- 51%**: The ratio of the width of the bottom facet to the total width.
- 12.5%**: The ratio of the width of the top facet to the total width.
- 69%**: The ratio of the width of the bottom facet to the total width.

The laboratory grow/diamond described in this Report ("Report") has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute ("IGI"). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of having grown by synthetic means. A certified diamond is one that has been analyzed and/or inspected by a trained, certified gemologist using the most appropriate and/or available equipment currently available to IGI, including, without limitation, 10X magnification, corrected eyepiece, binocular microscope, master color comparison stones, non-contact optical spectrometer, diamond detector, and/or other instruments and/or processes as deemed appropriate by IGI. This Report includes a diamond security features. A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and carat weight.
