\*Comments: This man-made diamond was grown in a laboratory by the CVD method, and has the same chemical, physical, and optical properties as a natural earth mined diamond.

This lab grown diamond is classified as Type IIa, which is the most chemically pure type of diamond, and almost or entirely devoid of impurities. Only 1-2% of natural earth mined diamonds are Type IIa, whereas, colorless and near-colorless CVD lab grown diamonds are usually Type IIa.

### Light Performance Profile

Optical Brilliance Analysis:
Brilliance is the overall return of light to the viewer. The

brilliance image is a representation of (a) white areas of light return, or brilliance, and (b) dark-blue areas of light loss.

### Optical Symmetry Analysis:

The colored areas of the symmetry image are indications of light handling ability, giving a visual representation proportions and facet alignment.

# Proportion Diagram:

The proportion diagram illustrates the actual dimensions as recorded by optical scanning technology.
