

## CSU, San Bernardino Center for Global Innovation

SAN BERNARDINO, CALIFORNIA

The proposed project—dubbed CSUSB’s Center for Global Innovation—will be located at the heart of the campus and will be a new campus gateway for students. The new building will be a LEED Platinum, 70,000-square-foot, three-story building housing classrooms and administration offices for the College of Extended Learning. The classrooms range from 500 square feet to seat up to 25 students to 3,000 square feet seating up to 250 students and will be used by the entire university.

Working as an integrated design team, including architecture, landscape architecture, interior design, mechanical, structure and civil engineering, LPA worked with CSUSB to integrate a social experience with academics on its campus.
